REPORT

OF THE

Minister of Education

FOR THE YEAR 1930

TO HIS HONOUR W. D. ROSS, ESQ.,
Lieutenant-Governor of the Province of Ontario.

YOUR HONOUR,—

I beg leave to present to Your Honour the Report of the Department of Education for the year 1930.

The Present Outlook

The information derived from inspection and from other sources indicates that the elementary and secondary schools were in good condition during the period under review. For several years these branches of the educational system have steadily advanced in efficient management and in development. The check to material prosperity which displayed itself during 1930, but which is hoped to be a temporary depression only, produced no visible effect upon the schools. Apprehension existed, on the outbreak of the Great War, and even while it lasted, that education generally would suffer from the social and financial dislocation that overtook the world. These fears were not realized. Instead, the belief spread that increased educational facilities would be the surest method to prevent a relapse into the savagery of war and that a return to normal prosperity would be ensured if the youth of the country, with the future in their hands, were better prepared to carry on their duties as citizens and as bread-winners. Among all the communities directly concerned in the struggle, the Province of Ontario probably applied these lessons more quickly and thoroughly than some other English-speaking regions. The result was the expansion of the ten years that followed. The measures adopted included the setting up of additional provision for vocational training, the extension of the compulsory school age, and the raising of the standard of professional teachers. These and other improvements involved individual sacrifice and heavier expenditures, but the Province has benefited from them and the parents of children have courageously borne the burden in the firm conviction that more and better schooling is an investment and not a needless outlay of money. It would be difficult, now, if not impossible, to shake this conviction. The trying time through which the civilized world is passing, with lessened employment and diminished earning power, is not likely to injure permanently the school system of Ontario which is solidly established and sustained by all classes of people.

The Situation in Brief

The schools are maintained for a growing and intelligent population of over three millions, with all the obligations that implies, and from these obligations it is confidently expected the people will not shrink. Education is supported chiefly and administered wholly by representative boards of trustees selected by the ratepayers and to them is largely due the credit for the advances that have been made. During 1930 a survey of the situation supplies ground for congratulation. There were 7,706 schools of all grades in the Province, not taking account of the attendance and important work done in night schools. That was an increase of fifty schools over the previous year. The teaching force exceeds 20,000 teachers. The enrolled attendance exceeded 747,000 pupils and the average attendance 547,000. All these figures are higher than for the previous year. As will be observed later the improvement in school attendance figures is an outstanding illustration of the popular interest in education. The dimensions to which the investment of money in our schools has attained is impressive. Taking the elementary schools alone, the value of sites, buildings, furniture and equipment in 1929 amounted to \$113,327,632. In that year the total receipts of public school boards throughout the Province was \$44,488,305. The secondary schools represent a capital investment of approximately \$46,500,000 with an annual revenue of \$21,211,022 in 1929, the last year for which complete figures are available. The Province has not drifted into this expenditure. It represents a long period of devoted service by school trustees and parents to the public welfare as related to the training of youth with the result that Ontario to-day occupies a notable place in the field of education. At a time like the present it is natural that the cost of education should be scrutinized more keenly than when public and private finances are flourishing, and prudence suggests during any period that care should be taken to see that the value of money spent comes back to the spender. If curtailment in one respect or another, such as capital charges should become necessary, it may be assumed as a cardinal principle that the general efficiency of our schools will be preserved and that no abrupt halt to indispensable outlays is conceivable. This is the spirit which has animated Ontario for generations and represents the reasoned conclusions of its people.

Elementary Training

An evidence of the general desire to exact from the elementary schools the fullest return from the courses of study prescribed for them is to be found in the maintenance of fifth classes and the extension of class work beyond the senior fourth grade. The wish of parents to keep their children under the parental roof as long as possible is a salutary policy. To do this, it is discovered that the home school must not deny pupils the advantages which pupils in larger centres can secure. A movement of this sort has been proceeding for some time in nearly every part of the Province, and the reports for 1930 confirm the fixed intention of parents to extend the elementary programme to the limits assigned to it. The number of such classes has increased. They now number 1,239 and the special legislative grants are conditional upon certain factors such as attendance. Where the required attendance is not obtainable, the work is carried on in many localities without the grant. It was common enough practice at one time, in engaging teachers, to exempt them from the duty of teaching fifth class subjects, but the supply of teachers with higher professional attainments having become adequate there is no longer need to adopt a course which undoubtedly tended to

dwarf the work of the rural public schools and send away pupils to more distant schools for the instruction they demanded. The inspectors report that the results of the high school entrance examination in 1930 were satisfactory. The percentage of candidates who passed exceeded that of the previous year. The elementary schools are going forward steadily in the work done in the classrooms and in the provisions for equipment and accommodations made by trustees. The omission in some schools to allot seat work in order to render work by the pupil at home needless is not a feature which can be regarded with approval. It is proper that I should record with gratitude the encouragement given to the school by organizations like the Women's Institutes, a helpful interest which is much appreciated.

Inspection of Schools

When the appointment of county public school inspectors was assumed by the Province, the district inspectors having always been similarly appointed, the counties were relieved of an expense aggregating approximately \$175,000 yearly. The policy is working out satisfactorily in every way. The change from dual control to the direction of a single authority enables the inspectors to concentrate upon one of the primary duties of their office which is to bring about improvement in the work done in the classroom by inspiring the teachers and pupils and by sympathetically assisting teachers to improve their practice. The effect of this intelligent and helpful aid to more thorough work in the elementary schools will be conspicuous as time goes on and the inspectors are now free from too much local pressure and co-operate loyally with the Chief Inspector. Under former conditions too much of the inspector's time was consumed in administrative and clerical duty, but for the future he will have adequate clerical assistance, permitting him to devote himself to the needs of the classroom. It is not too much to anticipate a fresh stimulus to elementary education from these efforts.

School Attendance

The improvement in school attendance, which has risen by 14 per cent. in rural schools and by 12 per cent. in urban schools, has been produced by the co-operation of all concerned in the work. The supervising officer for the Province, the local officer, the inspectors, the teachers and certain useful agencies outside the schools have combined their efforts. Their excellent labours have hitherto been hampered by the absence of detailed and definite information which, if known, could be effectively applied in every locality. This has now been supplied. For the first time in the history of the elementary schools there was collected in 1930 on a systematic basis, by the teacher of each school, the information respecting absences and the causes of these absences. The actual loss of time in days and the reasons given to account for it are now known with a reasonable degree of scientific accuracy and with this basis to work on the correction of the evil should be easier. The data gathered by the teachers has, moreover, been summarized and conclusions of general interest reached. Illness is responsible for 60 per cent. of the total loss of time, there being 15 per cent. less sickness in rural than in urban schools. The withdrawal of children from school, allowed for a limited time in the rural parts, is classified under home help and accounts for 9.5 per cent. To parental neglect is attributed a loss of 5 per cent. and to physical obstacles 1.5 per cent. There is a considerable loss defined as due to other reasons, that is through unwarranted holidays, lost days at the

opening and closing of school terms, withdrawal of pupils for departmental examinations, and so forth. It is certain that some of this loss could be saved by stricter adherence to the law. Truancy has ceased to be a cause of substantial loss and occurs less in rural than in urban schools. The outstanding factor in irregular attendance is clearly illness and this points with unmistakable emphasis to the need and value of extending the health service to every school in the Province. On the whole, the results obtained under the new system of gathering data are satisfactory and creditable to all those responsible for it.

Railway School Cars

The School Cars continue to fill their unique place in the scheme of education. They are carrying instruction to the doors of children who would otherwise be wholly denied. Prior to the advent to the School Car, the condition of these isolated groups of people was pathetic in the extreme. They were out of touch with the world, cut off from most of life's wider interests and sharing little in the stimulus given by mixing with larger groups of people. The outlook for their children, without education, provided a seed ground for the germs of social discontent. The School Car changed all this; human contacts were established hope was revived, homes and lives were transformed, a happier present and a future of promise were assured for both parents and children. No wonder that the periodic appearance of the School Car at its point of call is hailed with joy by the waiting group of boys and girls and its departure equally regretted as they wave it *au revoir*. Naturally, the few days of pause at a school station are packed with work. Rarely is a child absent; they are the only 100 per cent. schools in Ontario, and reports show that such is the success that many children of non-English speech within even four years have reached high school entrance stage, and by virtue of the peculiar system of self-help inseparable from the system, all have developed initiative and self-dependence that are the most desirable by-products of any proper system of education. The School Car has furnished a medium through which other helpful services flow to these remote areas. Accommodation was provided throughout the past year for dental clinics. In connection with these, the teacher on one of the school cars reports: "In four years I have witnessed very painful sieges of neuralgia and ordinary toothache. Here the teeth simply ache till they die. In going over the circuit but once, the dental practitioner extracted 142 teeth, put in 403 fillings, and saved scores from suffering where 90 per cent. never had or would have dental care." The success of this venture was so pronounced and the need so pressing that a scheme may be evolved by the Department of Health for separate full-time service of a dental car on the railway lines of the North. Day school work is supplemented by night classes, mainly for adults. Lessons are given in English for the non-English, help in the rudiments of reading, spelling, writing and arithmetic, associated with their daily occupations and simple practical talks on live topics, Canadian history and civics, all of which serve to furnish a knowledge of Canadian principles of government and modes of living, and to inculcate Canadian ideals and the practice of good citizenship. Home craft is also cared for by the wives of the teachers, who are actively interested in thus extending the service of the cars, and, on the whole, the School Car is exercising a transforming influence upon the entire character of living and outlook in these isolated areas of the Province. It is significant that where recent immigrants are within the spheres of the cars' work there is no report of communistic doctrines or red propaganda.

Correspondence Courses

This method of reaching isolated pupils, who, by reason of distance or other causes, would be deprived of a public school training, continues to flourish. It was instituted five years ago with an enrolled attendance of 200. The number of pupils has risen to a thousand and through the help in these remote homes given by parents and guardians the children make surprising progress. The Department receives grateful tributes continually from those who benefit by the courses and already a number of pupils have passed the high school entrance examinations.

The Cost of Examinations

The question of provincial examinations has been under consideration during the year. The increased number of candidates and the larger number of papers to be read and valued tend to make the system of examinations both burdensome and costly. For years the policy of the Department has been to lighten the load as far as is practicable by accepting teachers' reports wherever there appeared to be a reasonable body of opinion behind the movement. Already in the high school entrance examination the local authorities may, under stated conditions, approve of the promotion of pupils on teachers' reports. Pupils whom the teacher cannot recommend must write the examination. This has led to considerable relief especially in the larger centres. The Department has also applied the principle in the Lower School stage of the High Schools to all pupils whose work in the classes is under inspection by officers of the state system, candidates who have prepared by private study or who attend schools not under provincial control being left to write the tests. This, also, has done something to improve the situation. A third step in contemplation is to accept the teachers' reports for the Middle School examination by passing which candidates may enter the Normal Schools or attain the standing of Junior Matriculation into the universities. In the discussion of this proposal, needless to say, the Department has kept in close touch with the universities and the most experienced teachers in the Province. The opinion of the change is generally favourable. It is suggested that the examination should be allowed, without a written test, to all candidates who are ranked at 66 per cent. or higher by their teachers. It is true that this imposes a difficult and delicate duty upon teachers, but the plan has worked out successfully in connection with the Lower School examinations and the teaching body is not inclined to evade any task assigned to it, however onerous that may be. Furthermore the preference for written tests finds its chief support from parents and pupils who seem to have a traditional confidence in concrete results set forth in official certificates. The tendency, however, is to restrict examinations to those which are strictly necessary.

The cost of examinations, sometimes complained of by individual parents on account of the fees, entails a heavy charge upon the Province. In the year 1928-9 the expenditure on this item was approximately \$345,000 and the receipts from fees \$105,000, leaving a deficit of \$240,000. In 1929-30 the expenditure had risen to \$372,000 and the fees to \$116,000, leaving a deficit of \$256,000. Two other considerations, even more serious, must be kept in mind: the strain, physical and mental, upon candidates who prepare for written examinations and the growing difficulty of securing the publication of results in time for the opening of schools so that pupils and parents may make decisions and arrangements respecting the future. The work of the examiners during the summer months invades the period required for rest and recreation and the Department is forced to add a staff of clerical assistants whose services increase the cost. There are

other phases of the whole question which need not be dealt with here but I am of opinion that a careful study of the subject should be made by all concerned.

An experiment, analogous to the use and value of examinations, is fully outlined in the report of Professor H. E. Ford, M.A., upon the new-type question papers which were tried out in certain secondary schools of this Province and designed to shed light upon both the trustworthiness and the cost of examinations. It is believed that the new-type questions would reduce materially the time taken to mark answer papers, perhaps by one-half. The conclusions reached by those in charge of the experiment are thus expressed in the report:

1. The tests used in this experiment although not standardized but merely informal objective tests using new-type technique have proved to be considerably more reliable than the old-type examinations and to possess more value for individual measurement.

2. As regards validity their correlation with the school marks shows that they are almost if not quite as valid as the examinations.

3. This conclusion as regards validity is confirmed by the correlation of the test results with the results of the examinations.

4. It seems certain that a single test employing new-type technique can be constructed that is more reliable and quite as valid as two old-type examinations in a foreign language.

5. A single old-type examination is not a good substitute either from the standpoint of reliability or validity for two old-type examinations in a foreign language.

6. As regards cost of reading it is quite evident that the tests can be read for approximately one-fifth of what it costs to read the old-type examinations. This is a very conservative estimate.

The Supply of Teachers

As will be seen by the reports from the training schools the attendance has increased. There were 373 intramural candidates for the High School Assistant's course, while in the Normal Schools the attendance in the first year courses of candidates for either the first class or second class certificate was 1,430. Of these the large number seeking the first class certificate, 687, reflects the higher academic qualifications of those who enter the profession. It requires no great stretch of memory to recall the day when the majority of the teachers in the elementary schools held third class certificates only, obtained after a brief period of professional training at local centres upon a slight academic foundation. When the Model Schools were abolished and additional Normal Schools provided it was believed that the effort to staff the Public and Separate Schools with more highly qualified teachers would prove a long and difficult task and that candidates enough would not present themselves for the higher standards demanded. This anticipation was not fulfilled and the scarcity was of short duration, easily bridged over by temporary expedients. The Normal Schools, increased from three to seven, were well attended from the first and holders of third class certificates quickly improved their professional standing and received second class certificates. The impetus given to elementary education by this policy has effected the steady replacement of first class certificates for second class certificates. The demand of parents that their children should be given the best possible training by competent instructors, coupled with the readiness of teachers to meet this demand, has wrought a remarkable improvement in the elementary schools. The institution of a second year course in the Normal Schools is an advance along similar lines and in due time will mark an equally

advantageous result. The truism that the teacher is the school is being applied in all progressive communities to produce the highly trained teacher and in Ontario this policy is intelligently grasped and acted upon. The provision of a second year of training at the Normal Schools was in response to public opinion and was endorsed by the organization of the elementary teachers themselves. The arrangement adopted was that a teacher, after one year's attendance, would receive a certificate upon which at least two and at most four years' teaching could be given. Reattendance for a second year made the certificate a permanent one. The first of these second year courses was set up at the Toronto Normal School last year and the attendance being optional was not large. It is expected that the number of candidates offering themselves in 1931 will be larger and all the facilities needed for the necessary training will be provided. The Regulations adopted in 1930 present the general outline of the purpose and content of the courses which, it is confidently believed, will insure efficient teaching of the subjects of Form V in the elementary schools and in the Lower School of the Continuation Schools and will enable the teacher to qualify by special training for either rural or urban schools, as he may elect, the certificate being valid in both.

Auxiliary Classes

Education organized on a democratic basis implies equal opportunity for all—equal opportunity to attend school and likewise equal opportunity to benefit from attendance. Two problems relevant to this implication arose at the time of the establishment of a democratic system of education in Ontario, (1) that of bringing the child to the school, (2) that of bringing the school to the child. The first has to a large extent been met by the passage of several Attendance Acts. A solution of the second problem necessitated a modification of the rigidly academic type of education inherited from a previous age. That solution is being effected by the universities through the introduction of optional courses and the establishment of professional colleges. Secondary education has sought to bring about the change through the organization of technical, commercial and agricultural schools. In primary education effort is being made to adjust the school to the needs of the exceptional child through the institution of auxiliary classes. The Auxiliary Classes Act of 1914 provided that, "A board may establish and conduct classes for children who . . . are from any physical or mental cause unable to take proper advantage of the ordinary public or separate school courses." Twenty-six such classes had been organized throughout the Province by December, 1920; 145 by December, 1925, and 283 by December, 1930, the last named year showing an annual increase of 19 per cent. Five thousand eight hundred and ninety-three children now enjoy the advantage of special courses adjusted to their particular needs. Of this number 4,061 of the non-academic, direct-learning type are accommodated in training, promotion and special industrial classes, 1,834 physically handicapped children are cared for in orthopedic, open air, hospital, sight-saving, lip-reading and speech-correction classes.

Auxiliary class work has been organized in 25 of the 27 cities of Ontario (including urban York) and in 12 of the 21 towns having a school population above 1,000. Surveys have recently been conducted in five of the eleven remaining cities and larger towns. Regulations enacted in May, 1930, extend the advantages now enjoyed by children of these larger urban centres to boys and girls of rural communities and small towns by providing for the establishment of Partial Classes, Rural School Classes and Visiting Teacher Units. Classes representative of all three types are now in successful operation. It is believed

that provision has now been made for the training of all educable children within the boundaries of the Province.

In contradistinction to the policy pursued in other countries it may be noted that in Canada and more particularly in Ontario the establishment of Auxiliary Classes is a matter within the autonomy of local school boards. Special training for teachers, inspectorial service, free surveys and grants equivalent to one half the excess cost of education are provided by the Government. It is felt that a policy which aims at securing the good will and voluntary co-operation of a community is productive of more beneficial and permanent results than measures of compulsion. The rapid extension of the work and the fact that only one auxiliary class has ever been discontinued is proof of the wisdom of such a policy. Since the institution of junior and senior classes for the training of pupils of the non-academic, direct-learning type the number of commitments for juvenile offences in Toronto has decidedly diminished. Records from these schools show that hundreds of girls and boys who under other conditions seemed inevitably doomed to social wastage are now self-supporting and self-respecting citizens. While an ultimate solution of the problem presented by the socially maladjustable child may not yet have been evolved, it is felt that the substitution of preventive training for subsequent judicial institutional and charitable remedies is affording a large measure of practical relief.

Vocational Training

The various steps adopted to provide vocational training since the Act was passed are in response to a widespread feeling that this phase of secondary education required special development. Noteworthy results have followed. There is now an attendance of more than 20,000 pupils in the day vocational schools and in the evening schools of 44,431. In the latter, it may be noted in passing, there was given at twenty-three places in the Province special instruction to newcomers to Canada whose knowledge of English and of our institutions has been greatly improved thereby. Another function which is being discharged in connection with the vocational school courses is the training of apprentices, and there were established in 1930, at Hamilton and at Toronto, classes for this purpose. It is proposed during 1931 to open similar classes at Windsor and at Ottawa and as time goes on to establish them, as required, at other centres. Both the apprentices-in-training and the employers speak well of the work being done. The enlargement of vocational training in the Province has been made possible by the work of the Technical Training College at Hamilton which continues to afford a variety of courses qualifying for the different subjects taught in the schools. The attendance was 183 when the college was first set up and in 1930 it was 371. The increased number in attendance during the year was due to new courses offered and to the return of graduates desiring to profit by summer courses. The college continues its extension work. It has also established an advanced course in vocational guidance. This will enable teachers assigned by advisory committees to this duty to extend their knowledge of its principles and practice.

Schools Attended by French-speaking Pupils

Under the policy adopted in 1927, the schools which are attended by French-speaking pupils and in which French is an approved subject of instruction are gradually improving in efficiency. The plan instituted at that time is already being justified by its results. It is pleasing to note the general attitude

of co-operation on the part of school boards and teachers in the attempt to carry out the proposals of the Department. The Director of English Instruction, the Director of French Instruction, and the inspectors report substantial improvement in the ability of the pupils to speak, read, and write both languages as well as to deal with the other subjects of the course of study. The fact that 962 French-speaking pupils passed the high school entrance examination in 1930 is evidence of the success of the work that is being done. This number represents an increase of seventy-eight over the previous year. There is reason for confidence that the improvement already begun will be progressive and cumulative. The Normal School established at Ottawa for the training of teachers for these schools has shown a remarkable growth in attendance during the three years of its existence. At the session of 1928-29, there were 14 students; at the session of 1929-30, there were 45; and at the present session there are 80 students in attendance. The preparation of increasing numbers of these teachers for first and second class certificates is one of the most hopeful features of the situation and can scarcely fail to raise the standard of the schools. At the June Departmental Examinations, 1930, and at the examinations following the Summer Courses of 1930 very few teachers engaged in schools where French is a subject of instruction failed to secure an advancement in standing of at least two subjects toward finally securing a professional first or second class certificate.

The reports and statistics appended to this report are worthy of the closest attention, dealing as they do with such important subjects as the Library Branch of the Department, the Schools for the Deaf and the Blind and other matters which set forth the progress of education in the Province.

Respectfully submitted,

GEO. S. HENRY,
Minister of Education.

APPENDIX A

REPORT OF THE CHIEF INSPECTOR OF PUBLIC AND SEPARATE SCHOOLS

Inspectoral Changes

The following changes took place in the Provincial Inspectoral Staff during 1930:

I.—BY DEATH:

J. P. Finn, B.A., Inspector of Separate Schools in Frontenac, Glengarry, Hastings, Lanark, Leeds, Lennox, Addington and Stormont Counties.

J. E. Jones, B.A., Inspector of Separate Schools in the City of Ottawa and in Carleton County.

John F. Power, M.A., Inspector of Separate Schools in the City of Toronto.

II.—BY RESIGNATION:

J. W. Rogers, M.A., Toronto.

H. B. Fetterly, M.A., Dundas County.

Richard Lees, M.A., Peterborough County.

In Memoriam

1. On June 6th, 1930, Mr. J. P. Finn, B.A., Separate School Inspector, passed away at his home in Ottawa at the age of 60 years. Mr. Finn was at one time Principal of the English-French Training School at Ottawa. He was appointed Separate School Inspector in 1907. He was well known throughout Ontario for his educational work and laboured with diligence for the success of the schools under his care.

2. On July 6th, 1930, Mr. James E. Jones, B.A., Separate School Inspector, passed away at his home in Ottawa in his 67th year. Mr. Jones taught at Peterborough and Mattawa, and in 1908 was appointed Separate School Inspector for Northern Ontario and Ottawa. During more recent years he inspected the Separate Schools of Ottawa and Eastern Ontario. Mr. Jones was devoted to his work and did much for the advancement of the Separate Schools under his supervision.

3. Mr. John F. Power, M.A., passed away at his home in Toronto on November 24th, 1930, at the age of 61 years. Mr. Power graduated from Queen's University in 1895. After teaching for several years he was appointed Separate School Inspector in 1903. He spent the year 1907 on the Ottawa Normal School staff. In 1908 he was appointed Inspector of Toronto Separate Schools. This position he occupied until his death. Mr. Power was one of the leading Inspectors in the Province during his term of office. On many occasions he acted upon committees appointed by the Department of Education for report on matters of interest to the elementary schools.

Resignations

1. Mr. Hiram B. Fetterly, M.A., was appointed Public School Inspector for Dundas County in 1918. He resigned at midsummer, 1930, and was appointed

Superintendent of the Institute for the Deaf and Dumb at Belleville, on July 1st, 1930. The schools of Dundas County have made splendid progress during Mr. Fetterly's term of office.

2. Mr. Joseph W. Rogers, M.A., resigned as Public School Inspector for the City of Toronto on August 31st, 1930, having ably filled that position from February 1st, 1912. After teaching in Lambton County for a few years Mr. Rogers joined the Public School Staff of Toronto in 1890, as Assistant Master in Jesse Ketchum School. The next year he was appointed Principal of Earl Grey School, and at the time of his appointment as Inspector was Principal of Dewson Street School. Mr. Rogers gave many years of faithful and efficient service to the Public Schools of Toronto.

3. Mr. Richard Lees, M.A., resigned as Public School Inspector of Peterborough East, on August 31st, 1930. Mr. Lees was formerly Principal of Lindsay County Model School, Science Master at Brampton Collegiate Institute for seven years and at St. Thomas Collegiate Institute for eleven years. He was appointed Inspector in July, 1905, and carried on the duties of his office with industry and zeal. The schools made marked advancement under his leadership.

Public and Separate School Inspectors Appointed in 1930

The following appointments to the Staff of Inspectors were made during 1930:

1. W. J. Stewart, B.A., B.Paed., Assistant Master of York Street Public School, Ottawa, to the County of Dundas, to succeed Hiram B. Fetterly, M.A. His duties began September 1st, 1930.

2. C. F. Cannon, B.A., Supervising Principal of Oshawa Public Schools, to be Public School Inspector for the City of Oshawa from August 1st, 1930.

3. D. D. McDonald, B.A., D.Paed., Principal of Orde Street Public School, Toronto, to the City of Toronto, to succeed J. W. Rogers, M.A., on September 1st, 1930.

4. H. E. Cavell, M.A., B.Com., B.Paed., Principal of Williamson Road Public School, Toronto, to the City of Toronto as an additional Inspector. His appointment dated from September 1st, 1930.

5. L. L. Skuce, B.A., Principal of Dr. MacDougall Public School, North Bay, to be Public School Inspector of District Division VI, with residence at Sudbury. His appointment dated from September 1st, 1930.

6. H. E. Elborn, M.A., Assistant Master of Chesley Avenue Public School, London, to be Public School Inspector of District Division X, with residence at Kirkland Lake. His appointment dated from September 1st, 1930.

7. C. P. Matthews, B.A., of St. Michael's College Staff, Toronto, to be Separate School Inspector succeeding the late J. P. Finn, in Separate School Division XIV, with residence at Kingston. His appointment dated from September 1st, 1930.

8. W. J. Greening, B.A., B.Paed., who taught in De La Salle Separate School and in the Preparatory School to St. Michael's College, was appointed to Separate School Division I, with residence at Port Arthur, to succeed F. J. McDonald, B.A. The appointment dated from September 1st, 1930.

9. A. Gascon, B.A., a graduate of Ottawa University and of the Ontario College of Education, was appointed as an additional Separate School Inspector, and assigned to Separate School Division III, with residence at Cochrane. The appointment dated from September 1st, 1930.

10. J. T. Anderson, B.A., of Stratford Collegiate Institute, was appointed to Separate School Division V.

Transfers

The following transfers were made in the Staff of Inspectors during the year 1930:

1. L. W. Copp, B.A., was transferred from District Division X to succeed Richard Lees, M.A., in Peterborough County East, with residence at Peterborough. The appointment dated from September 1st, 1930.

2. Robert Gillies, B.A., was transferred from District Division VII to York County as an additional member to the Staff of Inspectors in that area. His residence is at Aurora. His appointment dated from September 1st, 1930.

3. O. M. MacKillop, B.A., was transferred from District Division VI to District Division VII. His address is Sudbury, and his appointment dated from September 1st, 1930.

4. F. J. McDonald, B.A., was transferred from Separate School Division I, Port Arthur, to Separate School Division XVII, Ottawa. His address is at Ottawa, and his appointment dated from September 1st, 1930. He succeeds the late J. E. Jones, B.A.

5. C. Charron, B.A., has been transferred from Separate School Division III, Cochrane, to Separate School Division III (A) with residence at Sturgeon Falls. The appointment dated from September 1st, 1930. A new Separate School Inspectorate was created in this area at midsummer, 1930.

Additional Inspectors Needed

As a result of the readjustment of Inspectorates now being made, a number of additional Inspectors will be required. One will be needed in the Niagara Peninsula and one for a new Inspectorate formed of portions of the Counties of Peel, Simcoe and York. An additional urban Inspector, whose duties should begin not later than September 1st, 1931, will be required for the Border Cities of Windsor, Walkerville and Sandwich, and in the City of Hamilton there is now a sufficient number of Public School teachers to warrant the appointment of an additional Inspector.

The number of classrooms in the Separate Schools throughout the Province has increased greatly since the last readjustment of these Inspectorates three years ago, and an additional Inspector will be needed in September, 1931.

Consolidated Schools

In the Province there are twenty-eight Consolidated Schools, located as follows:

1. In the Districts—18.

In Kenora District, Quibell; in Rainy River District, Barwick, Burriss and Morley; in Thunder Bay District, Dorion and Nipigon; in Temiskaming District, Charlton, Hudson and Savard; in Parry Sound District, Byng Inlet, Katrine, Nobel, Point-au-Baril and Sundridge; in Haliburton, Gooderham, West Guilford and Wilberforce; and on Manitoulin Island, Mindemoya.

2. In the Counties—10.

In Welland, Falls View; in Lincoln, Grantham; in Wellington, Macdonald; in York, Humber Heights; in Hastings, Tweed; in Addington, Tamworth; in Prince Edward, Wellington; in Leeds, Mallorytown; in Dundas, North Mountain; and in Carleton, Grant.

Nearly all these schools provide Secondary School education either by Fifth Classes or by the establishment of a Continuation School. A large rural area, therefore, contiguous to the school has educational advantages similar to

those enjoyed by the urban centres. At present there are indications that the number of consolidated schools will increase. At the moment, two communities in the northern part of the Province and one in the south are each giving consideration to the formation of a consolidated school section in its respective district.

Travelling School Cars

Dr. J. B. MacDougall presents the following review of the work and progress of Railway School Cars:

The year 1930 saw the addition of another car to the flotilla of moving schools. This car was placed in commission in September and covers a field of which the terminal points are Glenwater and Bears Pass on the Port Arthur-Fort Frances Division of the Canadian National Railways, a distance of 162 miles. It is the most complete car yet installed, from the point of view of comfort, convenience and working equipment. The field has long lain fallow so far as educational opportunities are concerned, and the car received a genuine welcome from the sequestered settlements along the line.

This makes the fifth car in commission. The progress of the pupils through this service has surpassed all reasonable expectations. Pupils of foreign parentage who knew little even of spoken English have reached, in a few years, the Entrance grade. All have developed initiative and self dependence that could come only through a system which throws them largely upon their own resources. Adults have profited no less than their children through night classes with specialized programmes suited to their requirements. The wives of the teachers have shown commendable tact and zeal in helping the families on the side of health and homemaking. On the whole, the cars have fully vindicated their usefulness in moulding the varied racial types into the fabric of strong Canadian citizenship.

Rural School Fairs

We are indebted to Mr. R. S. Duncan, B.S.A., Director of Agricultural Representatives, for the following review of the Rural School Fair movement.

In co-operation with the Ontario Department of Agriculture, rural school fairs were conducted again during the past year. That interest in this phase of work is still growing is borne out by the fact that at the 565 fairs held, 122,606 boys and girls, representing 4,747 different schools, took part. As in the past, the Agricultural Representatives distributed grain, vegetable and flower seeds to the boys and girls. Classes for these different varieties were provided in the prize lists for the fairs which were held in the fall. In addition, classes were also provided for the various breeds of live stock and poultry, exhibits of manual training, sewing, cooking, nature study and fruit.

School Fair Day is one of the high lights of the year for rural boys and girls. From early morning until 4.00 p.m. a programme of competitions and demonstrations makes the day a busy and interesting one. In addition to making the awards, the official judges explain the reasons why, and thus the educational value is at all times kept to the fore. While the Agricultural Representatives are the managers of these events, they are at all times ably assisted by the Public School Inspectors and teachers. According to the Agricultural Representatives, the interest taken in this phase of work by the boys and girls is dependent to a great extent on the interest shown by the teachers and Public School Inspectors. To the Department of Education, therefore, belongs no small part of the credit for the results that have been achieved.

School Health Supervision

Dr. J. T. Phair, Director, Division of Child Hygiene, makes the following report on the work of the Division during 1930:

The extension of this worth-while service to the rural and small urban communities not now served is still one of the major activities of those officers of the Health Department charged with the responsibility for the supervision of child health work in the Province. For some years an organized effort has been made to demonstrate the practicability of a permanent programme in combinations of towns, villages and rural townships. This work has borne some fruit during the year. In two instances such combinations were put into effect, and in one other case the service was re-established after a lapse of some three years. In two other instances the interested municipalities were seemingly seized with the importance of the suggested plan, but postponed action until the trend of the financial cycle becomes upward. It is further hoped that the work done during the year in some of the other areas will be brought to a satisfactory conclusion early in the new year.

Some seventy municipalities, five of which are rural, receive official endorsement for this work in the shape of a grant either from the Department of Health or the Department of Education. The work is carried on without official recognition in ten centres. Eight school sections located in the suburbs of Toronto carry on their own service. There are sixteen combinations of rural school sections and urban municipalities on a more or less acceptable type of service; these are largely situated in the south-western section of the Province.

A consideration of these figures will give some conception of the size of the task still confronting those engaged in the extension of this work. This task could be materially lightened if there were exhibited a larger measure of enthusiasm on the part of teachers engaged in those districts not now carrying on school health supervision.

Music and Art

This work of the schools in the subjects of Music and Art has been extended greatly during the past year, due to the co-operation of trustees, teachers and Inspectors and the liberal grants given by the Department of Education. The following tables of comparison indicate this extension:

Music

School Year	No. of Special Teachers	Grants paid to Teachers	No. of Boards	Grants paid to Boards	Total Amount of Grants
1928-1929.....	142	\$6,140 00	155	\$4,635 23	\$10,775 23
1929-1930.....	187	7,344 00	349	10,563 00	17,907 00
Increase.....	45	\$1,204 00	194	\$5,927 77	\$7,131 77

Art

School Year	No. of Special Teachers	Grants paid to Teachers	No. of Boards	Grants paid to Boards	Total Amount of Grants
1928-1929.....	98	\$4,264 00	37	\$1,526 25	\$5,790 25
1929-1930.....	123	5,127 00	54	1,850 25	6,977 25
Increase.....	25	\$863 00	17	\$324 00	\$1,187 00

The correspondence constantly being received at the Department of Education from local organizations, trustees, teachers and individual ratepayers, indicates that a greater interest is being taken in Vocal Music and that more and more people are desiring a full course in this subject in the elementary schools. In a number of the larger urban centres instruction in instrumental music is also being given after school hours.

The Penny Bank

Mr. J. R. Littleproud, Inspector for the Penny Bank of Ontario, has been good enough to present the following statement showing the progress of the Penny Bank during the year 1930:

During the year this office continued its policy of encouraging school savings as operated in the schools of the Province through the Penny Bank. I am pleased to note that many of the Public and Separate School Inspectors are giving this project real support. The Penny Bank Inspector reported several times during the year on the splendid co-operation which he was receiving from the local Inspectors. During the year new branches were opened in the schools at Aylmer, Briar Hill, Hawkesbury, Jarvis Street Junior Vocational School (Toronto), Marden, Merritton, North York (S.S. No. 21, S.S. No. 31), Nobleton, Oshawa, Owen Sound, Port Credit, Port Robinson, Waubauskene, Whitby. There are now 448 schools in the system, having a total balance of \$1,355,500.00 as at the 30th November, 1930. A recent bulletin issued by the Penny Bank indicates that the financial depression has caused an increase of about 15% in the amount being withdrawn from these accounts and has decreased the amount of the weekly deposits by about 15%. In spite of these facts, the number of deposits being received weekly has been maintained, and the number of savings accounts has been increased. From these data, it is evident that school savings is accomplishing a great service in our schools. A valuable reserve fund has been built up to take care of emergency expenditures. The habit of saving has been so thoroughly inculcated that it persists in the face of adverse conditions.

Summer Courses

Mr. Neil McDougall, Director of Summer Courses, makes the following interesting review of this field of work:

The Summer Courses conducted by the Ontario Department of Education are for the benefit of teachers who desire to spend a part of their summer vacation in an effort to improve their academic and professional standing, and thus to become more efficient in carrying on with a modernized curriculum. No fees are charged the teachers who attend these courses, and no provision is made for assisting them with an allowance for living and travelling expenses except in the cases of those who served overseas during the war, to whom one dollar per day is allowed. That the teachers fully appreciate the opportunity of taking Summer Courses is shown by the constant increase in attendance from year to year. In 1930 the registered attendance was 3,920.

The Courses offered last summer were as follows: In Agriculture and Horticulture, in Art, for Auxiliary Class teachers, in Commercial subjects, for the High School Assistant's certificate, in Household Science, for the Kindergarten-Primary certificate, in Manual Training, in Middle and Upper School subjects, in Oral French, courses for teachers of English-French Schools, in Physical Culture, in Vocal Music, for School Librarians, for School Nurses, in Vocational Subjects. There were also Refresher Courses in Science for teachers in Secondary

Schools and a Refresher Course in English and History for teachers in Elementary Schools.

The Summer Courses for School Librarians was given for the first time in 1930. The main purpose of this course is to train teachers to select and to make the best possible use of School Libraries. To what extent this object was achieved last year may be judged by the following typical extracts from reports of those who attended the course. "The Library Course as given by the Department has proved most helpful and instructive. The great need for well organized and properly administered school libraries I have realized as never before." "I say, unreservedly, that of all the many classes I have attended since graduating from Normal, this course was the happiest, and opened up the most avenues of thought."

Correspondence Courses

Mr. Neil McDougall, Director of these Courses, presents the following review for the year:

The plan of providing a Public School education by means of Correspondence Courses for persons of school age living so far from a school that they are unable to attend, has proved most satisfactory. This plan was begun in 1926, and for that year the enrolled attendance was 200. In 1930 the enrolled attendance reached 1,000. Of this enrolment 320 were in Primary Grade, 166 in First Book, 200 in Second Book, 200 in Third Book and 114 in Fourth Book. Fifteen of the pupils enrolled have passed the High School Entrance examination.

That these Courses are popular and adequately fulfilling the purpose for which they were instituted is attested by the hundreds of letters of appreciation received from the homes into which these lessons are sent. The following extracts are typical: "These Courses surely deserve the praise and appreciation of all concerned." "We think they are one of the wisest and best things ever begun by the Department." "We think our child is doing just as well as if she were attending school."

Interchange of Teachers within the Empire

Mr. Neil McDougall, who is in charge of these interchanges, reports as follows:

So far as interchanges of Ontario teachers with teachers in other parts of the Empire are concerned, the plan agreed upon at the Imperial Education Conference, held at London, England, in 1923, is being followed. By this plan teachers during the year of exchange retain their own salaries and the year is credited to them for all educational purposes the same as if it had been spent in their own schools. This interchange of teachers and the interchange of correspondence of school pupils in various parts of the Empire is making a very definite and important contribution to Empire unity.

During the school year 1930-1931 thirty-one Ontario teachers are on exchange with teachers in other parts of the Empire or with teachers in other Provinces of Canada. Of these there are twenty exchanges with overseas teachers and ten inter-provincial exchanges. In addition to these there is one exchange between Miss Grace A. West, B.A., of Pembroke Collegiate Institute with Miss Dorothy Hay, B.A., of King Edward Grammar School for Girls, Birmingham, England. The inter-provincial exchanges are becoming very popular. For the present school year, these include exchanges between Ontario teachers and teachers in British Columbia, Alberta, Saskatchewan and Nova Scotia.

School Attendance

Dr. J. B. MacDougall, Chief Attendance Officer, makes the following general review of School Attendance for the year:

School Attendance is a vital factor in school progress. This truth is gaining active recognition in the home where the key to improvement and the strength of the cause really lie. It is becoming a rare matter for the parent to wilfully detain the child merely on the ground of convenience or even on the plea of needed help. The exceptions to this rule are being slowly narrowed down in number through the vigilance and the well directed effort of the attendance forces.

Under the new system of recording and reporting absentees, these forces, viz., the teacher and the attendance officer under the supervision of the Inspector, are co-operating closely with the home with well marked results in the way of improvement. Rural areas are confronted with handicaps of a special kind that are difficult to surmount. But these areas are measuring up very favourably with urban centres and, in a few cases, owing to fine organization of the forces the former threaten to outmatch the latter in attendance. Boards of Education and Municipal Councils are making a more careful selection of attendance officers, and in the larger centres social organizations and welfare workers are helping to solve case problems which might well baffle the teacher and the attendance officer with their limited powers. Where Health units are established they are lending valuable support in maintaining conditions favourable to regularity of attendance. This combined effort will readily reflect itself in the progress of the pupils and in the general efficiency of the schools.

New Legislation re Appointment of Inspectors

Previous to July 1st, 1930, only the District School Inspectors and Separate School Inspectors were appointed by the Department of Education. On the above date in accordance with the Amendments to the Public Schools Act, 1930, all County Inspectors became Departmental officials with salaries and expenses assumed in full by the Department of Education. The object of this step was to make the inspection of elementary schools throughout the Province a service as completely detached from local influence or prejudice as possible and to control the duties of inspection in such a manner as to give greater help to teachers in the classroom and more attention to the internal efficiency of the schools.

The first duty of the Inspector, as defined in the Amendment to the Act, is as follows:

"To bring about improvement in the work done in the classrooms by inspiring the teachers and pupils and by sympathetically assisting the teachers to improve their practice."

In Ontario the Inspector has given up too much of his time to administrative and purely clerical duties. Under the Amendments of 1930 the Inspector will receive adequate clerical assistance and it will be the constant aim to focus his attention on the needs within the classroom.

Fifth Classes

There has been a widening of interest in Fifth Classes during the year. Not only are these classes popular and serving a very useful purpose in rural communities but they are gradually being established in the cities so that a

greater diversity of programme for the senior pupils of the public schools may be provided.

In the school year 1929-1930 there were 113 Grade A Fifth Classes, an increase of 5; there were 108 Grade B classes, an increase of 20, there were 121 Grade C classes, an increase of 26. In addition there were 1,431 other schools in which Fifth Class work was conducted to some extent. The total number of pupils attending these classes was 9,911.

In the year 1930, there were 4,040 candidates from Fifth Classes who were prepared for the Lower School Examinations. These candidates wrote upon 15,268 papers, and passed upon 12,707 of them. Of this number 8,243 were passed on recommendation, and the remaining number, 4,464, were passed by Departmental Examination.

The legislative grants made to Fifth Classes in 1930 exceeded \$45,000.

A New System of Grants

In August, 1930, the Minister of Education announced a new scheme of grants for all the urban and rural Public and Separate Schools of the Province. The new scheme provides for grants on the following bases:

1. Average Attendance.
2. Teachers' Salaries.
3. School Equipment.
4. Teachers' Certificates.
5. Special grants on Maintenance and Capital Expenditures to schools having an assessment per classroom lower than \$50,000.

The new system emphasizes the giving of grants to School Boards in proportion to the ability of the local authority to maintain its schools and this in turn gives emphasis to the principle that all children in the Province have a right to receive an equal opportunity with respect to an elementary education in as far as this can be brought about by co-operation between the Province as a whole and the local authorities.

Inspectors' Annual Reports

The General Annual Reports forwarded each year to the Department of Education by the Public and Separate School Inspectors indicate the lines along which progress is being made in Elementary Education.

The following excerpts are from these reports:

1.—DUTIES OF INSPECTORS.

Perhaps the most important function the Inspector can exercise is to keep in touch with the classroom work of the teachers and by suggestions, by taking part in the lessons, and by actual co-operation with the teacher in the work of the day do what he can to improve the work of the school.

2.—OUR EFFORTS HAVE BEEN SPENT IN FURTHERING THE FOLLOWING MOVEMENTS:

(a) the improvement of the general appearance of the school buildings and grounds.

(b) the bringing of equipment up to standard.

(c) the installation in the rural schools of indoor chemical toilets.

(d) the obtaining of suitable equipment for the carrying on of the work in agriculture.

(e) the reading course for teachers.

(f) the extension of the work in Household Science.

3.—QUALIFICATIONS OF TEACHERS.

Sixty per cent. of our teachers are carrying on extra mural work towards degrees, towards First Class certificates, or taking university extension cultural courses.

4.—TEACHERS' INSTITUTES.

(1) We have found that the most helpful institutes are those that give half of the time to general meetings where inspirational addresses are given by outstanding speakers with real messages, and where the other half of the time is devoted to Grade sessions where topics suited to each Grade are discussed.

(2) The benefit derived from the Teachers' Institutes is in direct proportion to the amount of interest the teacher takes in them and the extent to which he takes part in them.

5.—SCHOOL ATTENDANCE.

In both rural and urban schools a high percentage of attendance has been maintained. It has been increased from 89.4% to 93.7% based on the total enrolment and to 95.6% on the possible attendance.

6.—PUPILS' WORK.

Constant supervision is being given by the teachers to the work books of all classes in the schools. I have seen the best work books this year that it has been my pleasure to see since I entered upon the work of school inspection.

7.—SUPPLEMENTARY READING.

(1) Supplementary Reading is receiving more attention than formerly. Teachers are encouraging their pupils to read more because they have found that in reading the children acquire a fund of information and more or less of the author's style, both of which lead to better expression.

(2) Boards of Trustees throughout the Province are making valuable additions in books and are selecting them so that all grades will be adequately served.

8.—REPORT CARDS.

A Report Card should be a bond of co-operation serving to unify the efforts of parent, teacher, and child, in helping the child to progress socially, physically and intellectually.

9.—OUTSIDE ORGANIZATIONS.

Outside the school there are certain moderating influences which have considerable effect on the interest in such subjects as Art, Writing, Public Speaking and Essay Writing. The School Fairs, Women's Institutes, Home and School Clubs and the Trustees' and Ratepayers' Association, all conduct competitions in which Public School pupils only are qualified to take part.

The High School Entrance Examinations

In general, the results of this Examination throughout the Province for the year 1930 were satisfactory. The percentage which the number of successful candidates bears to the total enrolment is higher in 1930 than it was in 1929. This year the percentages in the various Inspectorates range from 4.3 to 11.5. In all but a few of the Inspectorates the percentage is in the range from 7 to 8.5.

Special Phases

Along with the movements, general in character, for better teaching, for better buildings, better equipment, better grounds, other movements, more special in character, have made progress, and are deserving of mention.

The Intermediate School, which is to some extent a copy from the English system, is being given a trial. To this school pupils who have at least completed the Senior III Grade are admitted. A programme of diversified courses is given, extending over a period of four years, so that pupils whose abilities are classified as non-academic, may proceed with courses which are more in line with their natural gifts and interests.

A wider acceptance of the Rotary Plan of organization and modification of it is apparent.

In one Inspectorate an earnest attempt is being made to develop a standardized test which will obtain the aptitudes of pupils for school work rather than their intelligence quotients.

In some schools adjustment classes are being organized for retarded pupils, and in certain schools prospective principals are given special experience to fit them for their future work.

General Remarks

The Inspectors' Reports show that the Elementary Schools have gone forward during the year both in the improvement of the work being done in the classroom and in the provision being made for better school grounds, school buildings and equipment.

Provincial and local organizations have shown a keen interest in the schools. In spite of the economic depression existing, all forces having contact with the schools have shown their desire to have the interests of the children provided for without stint or sacrifice.

I am indebted to all officials who have contributed reviews of their work in this report, and to my colleague, Mr. J. D. Campbell, for his hearty co-operation and assistance.

V. K. GREER,

Chief Inspector.

Toronto, February, 1931.

APPENDIX B

REPORT OF THE INSPECTORS OF HIGH SCHOOLS

During the past year there has been considerable activity in many parts of the Province in improving the school accommodations so as to provide more adequately for the steadily increasing enrolment in the high schools. For the following schools, new buildings were completed: Dundas, Earl Haig (Township of North York), Parkdale (Toronto), Port Credit, and Westdale (Hamilton). In the case of the following schools, important additions were undertaken: Barrie, Hagersville, Haileybury, Harbord (Toronto), Niagara Falls South, Niagara-on-the-Lake, Runnymede (Township of York), Wallaceburg, and Waterford. New buildings were proposed for Kirkland Lake and for Prescott. New schools were established at Westdale (Hamilton), and at Kapuskasing, while Scarborough High School was raised to collegiate rank.

The total enrolment for the year 1928-29 was 57,110, and for 1929-30, 64,964. The teachers employed during the corresponding periods numbered 1,955, and 2,047 respectively. This meant an average of 29.2 pupils per teacher in 1928-29, and 31.7 pupils per teacher in the following year. This increase in the size of classes has grave educational significance. It means that in some schools the classes are becoming much too large, and that, consequently, the personal contact between teacher and pupils, which is of great importance in education, is greatly lessened. Education should not only provide knowledge and develop the power to think, but it should also influence behaviour and views of life. The observation of the High School Inspectors in large and in small classes has convinced them that the ratio of pupils to teachers should not exceed the maximum of 30 to 1 permitted by the existing regulations.

The position of physical education in this Province, as in any young country, has been undergoing a gradual change. At first, the amount of physical labour to be done in the home before and after school hours rendered formal physical training almost unnecessary. Even to-day, in some quarters it is argued that "chores" and "home duties" furnish sufficient training. But among general educators and teachers of physical culture, the conviction appears to be growing that organized gymnasium and field work is of basic importance; that the development of big muscle activities is necessary for the effective growth of finer neuromuscular co-ordinations; that in games occur situations that have an important influence in the development of character. This latter belief, more or less clearly realized, probably accounts for the deep interest of public and educators alike, in physical education and in athletics in particular.

The High Schools and Collegiate Institutes of Ontario present a variety of attitudes towards this phase of education. Too many High School buildings possess the most meagre provisions for carrying on adequate physical culture. It is true that in some schools so handicapped the teachers display considerable resourcefulness and ingenuity in using the very limited means which the classroom provides. Even during the present school year, instances are recalled of girls standing on the tops of their desks swinging clubs in perfect time to the strains of music supplied by a table phonograph. It is a far cry from such conditions to those found in buildings of recent construction. In some of these there are two gymnasias, adequately equipped, and a natatorium, which is in almost

constant use. In such schools, the work of physical education is in the hands of enthusiasts fully alive to the possibilities of the subject they teach. In at least one city, a beginning has been made in medical supervision. The school nurse, in conjunction with the teachers of physical culture, has undertaken important corrective work, particularly with reference to spinal curvature and deformed feet.

In an increasing number of schools, steps are being taken to provide pupils, who necessarily remain for lunch, with food at cost. In the newer buildings, pupils are able to have their mid-day meal amid comfortable, and often very pleasant surroundings. In some cases, the school authorities take a deep interest in the kind of food chosen by the pupils. It would appear that the use of the school cafeteria presents a unique opportunity for influencing, in a very direct manner, the food habits of the boys and girls.

The High School Inspectors again wish to commend the excellent work of the teachers of this Province. They are effective sources of inspiration to the important group of young Canadians with whom they are in daily contact. Many of them are doing post-graduate work and many are taking advantage of the summer courses offered by the Department of Education and the Universities.

The inspectoral staff was increased in September, 1930, by the appointment of Mr. A. G. Hooper, M.A., Specialist in Classics, and former Principal of the Hon. W. C. Kennedy Collegiate Institute, Windsor.

High School Inspectors.

Toronto, Feb., 1931

APPENDIX C

REPORT OF THE INSPECTORS OF
CONTINUATION SCHOOLS

Number of Schools

At present there are 220 Continuation Schools in the Province of Ontario. At the opening of the schools in September, 1930, the Public School Inspectors were given charge of the Grade "C" one-teacher schools, in their respective Inspectorates. In all, these amounted to seventeen schools. The High School Inspectors were given charge of thirty Continuation Schools. Thus 173 schools and 394 teachers remain in charge of the two Continuation School Inspectors.

Additional Accommodations

During the summer of 1930 new Continuation School buildings were erected at Agincourt, Mount Albert, Powassan and Sutton. New buildings to provide for both Continuation and Public Schools were erected at Castleton and Seely's Bay, and an addition of two or more rooms for Continuation School purposes was made to the Public School buildings at Wales and Rockwood.

New Schools

During the year new schools were established at Aultsville, Flinton, Smooth Rock Falls and Wellesley. In each of these schools the full time of one teacher and half the time of an additional teacher is given to Continuation School work.

Twenty Years of Progress

During periods of general business depression the attendance at Secondary Schools increases, due to the lack of attractive opportunities in commercial and industrial life. While such conditions may be expected to affect more especially the attendance in larger cities and towns, they have also a very appreciable influence on the attendance at Secondary Schools in smaller centres and in rural districts.

Apart from the influence of varying business conditions, and merely as a means of measuring the increasing desire of rural people to secure for their children a better education as a start in life, we have thought it may be of interest to summarize the progress made in the Continuation Schools during the past twenty years:

1. Number of Schools:	1910	1915	1920	1925	1930
One-teacher schools.....	67	29	23	36	17
One-and-a-half-teacher schools.....	13	23	30
Two-teacher schools.....	65	98	100	105	123
Three-teacher schools.....	6	5	8	32	42
Four-teacher schools.....	5	6
Five-teacher schools.....	1
Six-teacher schools.....	1
Total.....	138	*132	144	201	220
2. Number of teachers.....	215	240	273	408	490
3. Attendance.....	5,917	6,800	15,823	9,944	10,534
4. Value of equipment.....	\$57,706	\$80,961	\$117,629	\$191,762	\$244,000

5. During this period 47 Continuation Schools have been given the status of High Schools. It is interesting to note that these 47 new High Schools now employ a total of 332 teachers.
*During 1913 thirteen county-formed Continuation Schools became High Schools.
†After 1919 the attendance is given for the school year instead of the calendar year.

Improvements in Accommodation

In order to provide class-room accommodation for pupils seeking Secondary School education in the centres maintaining Continuation Schools, and at the same time—in many cases—to provide suitable accommodation for the Public School classes, the communities in which these Continuation Schools are situated have, in the past twenty years, erected 197 new buildings or additions to old buildings.

Efficiency of Work as Measured by Examinations

At public meetings held to discuss the advisability of establishing Continuation Schools the Inspectors are frequently met with the statement that it is not reasonable to expect as successful work in a Continuation School with two young teachers, who may hold little more than First Class Certificates, as can be done in a High School or a Collegiate Institute with a much more mature and experienced staff composed of university graduates, many of whom are specialists in their departments. This argument is used freely by those opposing the establishment of Continuation Schools. It sounds convincing until the facts are examined and the conditions compared. While examination results are by no means the only test of the work being done in a school, they must be accepted as an important test.

When the comparative youth, the limited experience and the rather meagre academic preparation of many of the Continuation School teachers is taken into consideration, one is quite prepared for very moderate examination results, but when, after comparison, it is found, year after year, that these results compare favourably with the results obtained by the larger schools, one is compelled to recognize that other factors besides that of staff must be taken into consideration.

Other Factors to be Considered

Perhaps the most important factor is the smaller classes of the Continuation Schools. These classes usually consist of ten to twenty pupils, as compared with classes of thirty to forty pupils in the larger schools. Small classes permit of more individual attention, more frequent questioning, and closer supervision by the teacher, and necessitate more earnest application on the part of the pupil. Young pupils and slower pupils receive the personal touch and the attention without which they too frequently flounder about and become discouraged.

Another very important factor in the success of the Continuation Schools is one that, by many, may be regarded as time wasted. This is the daily study periods that each form must have, since there are usually three forms and only two teachers. In a well-organized school these study periods may be the most valuable periods of the day. The pupil has definite work to do, under the supervision of the teacher. He learns to work by himself and to depend on himself for results. This develops initiative and self-confidence, and when these qualities are combined with willing application success is assured.

While these two are perhaps the most outstanding advantages of the Continuation School there may be mentioned also the lack of a great many of the attractions that divert the minds of many pupils of the large towns and cities from anything so prosaic as school work. Also, rural districts and small centres provide a type of pupil usually more serious minded and with a keener sense of responsibility. From childhood they have shared the work in and about the home and these daily duties and responsibilities have aided greatly in developing habits of serious application.

Whatever the causes may be, when the amount of work to be covered in the time that can be apportioned to each of the different subjects is considered, the general success of the pupils attending the Continuation Schools is a surprise even to the Inspectors who visit these schools daily and see the earnest and efficient work done by both teachers and pupils.

Matters for Consideration

1. Many of the counties of the Province are so well provided with Collegiate Institutes, High Schools, and Continuation Schools that the great majority of the children may obtain a Secondary School education with little inconvenience or expense. But some counties are not so well provided with such schools. Ratepayers living at a distance of from five to ten miles from a Continuation School pay the same share of the county and township levy as those living in the same township within a mile or two of the school. In some cases, indeed, these distant ratepayers pay more than those living in the section in which the school is maintained; but, as they live so far away, their children have a small chance of deriving any benefit from the school.

This inequality of opportunity is very pronounced in those counties that have adopted Section 7 (1) (a) of the Continuation Schools' Act, whereby 50 per cent. of the cost of all pupils attending Secondary Schools is paid by the county. As this section of the Act is now interpreted, the ratepayers of the section in which the school is situated very rarely have to pay any part of the remaining 50 per cent. of the cost of pupils from the section, as this cost is usually more than met by the amount paid by the remainder of the township. Thus the ratepayers of the section in which the school is situated pay less than those outside and are in a position to derive a much greater benefit from it. Indeed, many Boards in such counties receive more money from the Government, county and township than is necessary to build and maintain the school.

2. At present the course of study permits an option between Agriculture and Science in both Lower and Middle Schools. Since the course prescribed in Agriculture is, in every way, at least as valuable for educational purposes as the course in Science, and, because of the situation of these schools, the source of supply of pupils and the knowledge of Agriculture already acquired by them, one might expect that Agriculture would be the more desirable option. But, though the Agriculture option is taken in a few of these schools, there is little indication that it will become general. The difficulty lies in the lack of a sufficient supply of properly qualified teachers. Frequently the option is taken for a year or two but when a change of teachers takes place Boards find it impossible to secure a teacher competent to continue the work.

3. There are at present fifty Continuation Schools with a staff of three or more teachers. Such schools are required to employ a Principal who holds a High School Principal's Certificate, and may carry on part of the Upper School course.

Some provision might be made whereby such schools may be required to become High Schools when the attendance is sufficient to give assurance that three or more teachers will be a permanent requirement.

No report on Continuation Schools would be complete without some appreciative mention of the earnest and efficient work of the teachers and the deep interest taken in the maintenance of these schools by trustees and ratepayers generally.

G. K. MILLS,
J. P. HOAG,

Continuation School Inspectors.

Toronto, Feb. 1, 1931.

APPENDIX D

REPORT OF THE DIRECTOR OF TECHNICAL EDUCATION

1929-1930

Progress During the Year

Continued satisfactory progress is being made in the attendance in the technical schools of the province. During the year 1929-30, the full-time daily enrolment increased from 23,063 in 1928-29 to 25,558, an increase of 10.8%. There was a resultant increase in the teaching staff of 198 persons. The enrolment of part-time students decreased from 2,411 to 2,100, a drop of 311. This is to be expected because of the growing idea that pupils should not leave school before they are sixteen years of age.

Statistical Information

The following tables show the progress of the Vocational Schools:

DAY VOCATIONAL SCHOOLS

	1922-3	1924-5	1926-7	1928-9	1929-30

Expenditures.....	\$1,871,614 21	\$3,105,235 11	\$3,499,380 46	\$6,090,938 00	\$6,173,009 09
Legislative Grants....	638,217 28	672,077 86	813,581 74	933,739 78	1,036,441 57

The year 1929-30 was marked by an extensive expansion in several centres of the accommodation provided for technical school pupils. The fine building in Westdale, Hamilton, housing both a technical and a commercial school was completed by September, 1930, and ready for occupation. In North Toronto, a commodious composite technical and commercial school was also opened in September. In Welland a vocational wing was added to the collegiate, and vocational departments were begun in Sudbury, Haileybury and North Bay. Plans were prepared and work begun on a large extension to the Windsor Technical School. A shop section and a girls' gymnasium were opened in connection with the Technical Institute, Hamilton. The new shop wing of the Sault Ste. Marie Technical School was formally opened in December, 1929, and the commercial department of the Napanee Collegiate was added to the list of departments operating under the Vocational Education Act.

Evening Classes

The constantly increasing interest in the evening classes is a cause for congratulation. The enrolment has advanced from 41,593 in 1928-29 to 44,431 in 1929-30, an increase of 6.8 per centum. The value of this work to this province at large can scarcely be over-estimated to keep pace with the increase in attendance. An ever-widening range of subjects is being offered. Classes in English for New Canadians were conducted at 23 centres, with an enrolment of 3,587. In these classes the attendance is remarkably regular and the pupils appreciative of the benefits received. The oxy-acetylene welding classes, wherever established, have proven helpful in increasing the earning capacity of the students. Such classes as shorthand speed, typewriting speed and retail selling have given that additional efficiency which means success. Undoubtedly the increased available supply of trained teachers for the night schools has contributed materially to the effectiveness of the evening classes.

Training for Apprentices

One of the problems which the technical schools of the province are trying to solve is that of providing adequate opportunity for supplementary training for apprentices to the various trades.

The problem resolves itself into two phases (a) training for apprentices as required by the Ontario Apprenticeship Act and (b) training for industrial apprentices.

During the first three months of the year 1930 special provision was made to furnish instruction for apprentices to the building trades in the Hamilton Technical Institute, and in the Central Technical School, Toronto. In the former city, classes were opened for apprentices in bricklaying, plastering, plumbing and heating, electrical wiring, carpentry and sheet metal work. Approximately fifty were enrolled in these classes. In selecting teachers, trade knowledge was made an essential qualification. Both the apprentices and the employers expressed themselves as pleased with the courses. In Toronto instruction was provided for eight bricklaying apprentices and fifteen carpenter apprentices. Preparations are being made to handle much larger numbers this year, in both Hamilton and Toronto, and to open classes in Windsor and Ottawa. As the work advances, centres will probably be opened in other technical schools.

With regard to the second phase of the question, excellent work has been done in the Hamilton Technical Institute. Apprentices from printing, electrical work, and agricultural implement factories are required to spend two evenings and one-half day each week taking up drafting and academic work. The printing apprentices devote considerable time to trade practice. Several of the technical schools offer training for apprentices in the evening classes. An extension of all types of apprenticeship training in the technical schools is desirable.

The Commercial High Schools and the Commercial Departments in connection with the technical schools are providing vocational training for an increasing number. The total enrolment in the day classes for 1928-29 was 12,301; for 1929-30, 13,011, an increase of over five per centum. In addition, there was an enrolment of 15,493 in the commercial evening classes. The suggested Commercial Courses issued by the Department in 1927 have been quite generally adopted, and have aided in making the commercial training effective.

A new problem has arisen in connection with technical education. Several communities with populations varying from 3,000 to 8,000 have requested that

some form of technical education be included in their secondary school courses. Financially, the school with several fully equipped shops is out of the question. These municipalities could afford neither to equip nor to maintain such schools. The number of students available would not justify the expenditure. It is possible that some development of the single general shop with one teacher trained to teach several subjects may be suggested as the best solution of the problem.

F. S. RUTHERFORD,

Director of Technical Education.

Toronto, January 24th, 1931.

(2) From universities outside of Ontario there attended the College of Education—one graduate from Dalhousie; two from Mount Allison; one from Bishop's; one from Laval; three from McGill; three from Montreal; five from Manitoba; two from Saskatchewan; one from Alberta; one from British Columbia, and one from London, England.

Enrolment in the Provincial Normal Schools

Toronto.....	359	314	673
Total.....	589	512	1,102

Special Courses

As in previous years special courses in Art and Physical Education were provided for teachers-in-training in the First Class Course. In these the enrolments:

	Art	Physical Education
Hamilton.....	45	..
London.....	59	..
Ottawa.....	..	42
Peterborough.....	60	..
Stratford.....	..	94
Toronto.....	..	25
Total.....	164	161

Academic Standing in Normal Schools

For the past few years there has been a steady improvement in the academic standing of the teachers-in-training admitted to the Normal Schools. In 1926, of the total enrolment, 30.9 per cent. of those admitted held Upper School standing. In 1927, this was increased to 41.3 per cent.; in 1928, to 45.7 per cent.; in 1929 to 48.1 per cent., and in 1930 to 49.2 per cent. In addition in the year 1930 of those actually engaged in teaching, eighty-two succeeded in raising their professional qualifications from Second to First Class.

Provisional Certificates

In 1930, the Department issued three provisional First Class, thirty-four provisional Second Class, and one provisional Kindergarten-Primary certificates. Of the teachers receiving these certificates, five came from Scotland; eight from England; two from Wales; four from Nova Scotia; one from New Brunswick; two from Manitoba; eight from Saskatchewan; three from Alberta; three from British Columbia, and two from the United States.

Second Year Course

In accordance with Departmental Regulations teachers-in-training who attended any of the Provincial Normal Schools in 1927-28, or in subsequent years, in order to secure permanent certificates must reattend a Normal School for a second year after teaching a period of at least two and at most four years. Provision was made for this Second Year Course and the first class was opened in the Toronto Normal School in September, 1930. The attendance at that date being optional, a large enrolment was not to be expected. However, sixteen teachers presented themselves and are now taking advantage of the course which is designed to, and no doubt will, improve their standing both academically and professionally.

Accommodations

In this report I can but reiterate what was said in 1929 regarding increased accommodation. At the Ontario College of Education extensions and alteration to the present building are urgently needed. For the want of these both students and staff are seriously handicapped. At all the Normal Schools, the proper physical education of prospective teachers calls for enlarged and well equipped gymnasiums.

Changes in Staffs

In October, 1930, Mr. A. C. Casselman resigned the Principalship of the North Bay Normal School, a position which he held since the opening of that school in 1909. Mr. Casselman has for many years given faithful service in our Public Schools, High Schools, and Training Schools, and has made a valuable contribution to the advancement of education in this Province, particularly in

Northern Ontario. There his influence will long be felt in the many schools in which his students have been and are now engaged as teachers. Mr. Casselman was a well equipped teacher and by the graduates of the North Bay Normal School will long be remembered for his efficient instruction, wise guidance, and helpful assistance.

To succeed Mr. Casselman, Mr. J. C. Norris, M.A., B.Paed., was appointed Acting Principal and Mr. W. J. Neale, B.A., was added to the staff.

To the staff of the Ottawa Normal School were added Mr. Henry Bowers, B.A., B.Paed., and Mr. O. E. Ault, B.A., B.Paed.

To the staff of the Stratford Normal School was added Mr. E. A. Miller, B.Sc.A.

To the staff of the Hamilton Normal School was added Mr. J. A. Partridge, B.A.

To the staff of the Peterborough Normal School was added Mr. J. O. McIntyre, B.A.

Mrs. Vera S. Fuller was appointed an Assistant on the staff of the Toronto Normal Model School.

Mr. E. Oakes, B.A., was appointed Principal of the Ottawa Normal Model School and Mr. C. E. Timanus and Mr. H. C. Redfern were added to the staff.

DUNCAN WALKER,

Director of Professional Training.

APPENDIX F

REPORT OF THE PRINCIPAL OF THE ONTARIO
TRAINING COLLEGE FOR TECHNICAL TEACHERS

Attendance

The enrolment of teachers-in-training continues to increase, as shown by the following table:

Year	Enrolment
1925.....	183
1926.....	204
1927.....	239
1928.....	270
1929.....	276
1930.....	371

The number of applicants for the regular course for a vocational certificate, entering for the first time, remains at a fairly uniform figure. The continued increase in attendance is due largely to increased summer school attendance, and this in turn is due (a) to the offering of new courses, and (b) to the continued interest of our graduates in the activities of the Training College, which leads many of them to return year after year to take a summer course. Some of those who enrolled in the first year, 1925, have attended every summer session since, taking one or other of the special courses offered. This is a tribute not only to the interest of these teachers in better fitting themselves for their work, but also to the holding power of the courses offered by the College.

The steady growth of the technical schools of the Province accounts for the continued absorption of vocational teachers. The opening of new manual training centres has provided openings for all the new manual training teachers.

As pointed out in my last report the possibility of the supply of vocational teachers and of manual training teachers overtaking the demand is becoming a probability. If such a situation arises the desirability of requiring a higher standard for admission, or a longer period of training, should be considered.

Summer Sessions

Part of the required courses for the ordinary vocational certificates is given in summer sessions.

In addition to these a number of special or improvement courses are offered for teachers already in service. The more important of these and the enrolment is shown in the following table:

Course	Enrolment
Specialist Vocational Certificates.....	63
Sewing and Dressmaking Certificates.....	33
Elementary Household Science Certificates.....	54
Elementary Manual Training Certificates.....	28
Specialist Manual Training Certificates.....	26
Vocational Guidance Certificates.....	25

Extension Classes

Extension classes in methods of teaching were carried on in the Windsor-Walkerville Technical School during the winter term of 1930. These classes

were held on Thursday and Friday evenings of each week. This arrangement was necessary as it was not possible to get together the whole group on one evening.

The class was intended primarily for evening class teachers who had had no instruction in methods of teaching. The number of such teachers in the Windsor-Walkerville School proved to be relatively small. A considerable number of trained and certificated teachers, mostly old students of the Training College, attended the course. The special condition created by a mixed class of this nature caused some modification of the course.

The work consisted of talks on methods of teaching, and practice teaching by the untrained members of the class. Multigraphed outlines of the course were given the students.

The enrolment of teachers who attended more than one night was thirty-five, and the average attendance each night 13.6.

It would appear from the situation in Windsor that, at any rate in the larger schools, the proportion of untained teachers in evening class work is decreasing.

Extension Letters

Circular letters on some special phase of teaching of interest to evening class teachers are sent out from time to time. These were originally planned to meet the needs of untrained evening class teachers who had taken an extension course. Requests from Principals for an additional supply of these letters, to be distributed to all teachers, have brought the circulation up to 700 copies of each letter.

Specialist Vocational Certificate

The courses for the Specialist Vocational Certificate continue to interest vocational teachers. Sixty-two teachers were enrolled in the summer session of 1930 in the various subjects required for this certificate.

The study of the place of new-type tests in shop work was not the least interesting part of the work. Each candidate was required to prepare a set of new-type tests and try them out on his classes before submitting them for approval. It is hoped in time to make use of these contributions in the preparation of a battery of tests for the several shop subjects that may be useful as standard tests.

Tests for trade skill and knowledge were given for the first time in 1930 in the following subjects—motor mechanics, carpentry, electrical installation, machine shop practice, mechanical draughting, and millinery.

Twenty candidates have completed all of the courses of study required and passed satisfactorily the trade tests, and have been granted certificates.

Vocational Guidance

For some years past *The Vocational Education Act* has given power to Advisory Vocational Committees to appoint duly qualified officers to collect and distribute information regarding available occupations and employments, and to offer such counsel to pupils, as will enable them to plan intelligently for their vocational and educational advancement.

Vocational schools have a special interest in the problem of vocational guidance. Teachers of practical subjects have a favourable opportunity for discovering the presence, or what is equally important the absence, of special abilities. To enable these teachers to make the best use of this opportunity, the Training College gives instruction in the principles of vocational guidance to all

vocational teachers. This has been done since the establishment of the College in 1925.

A more advanced and specialized course in vocational and educational guidance, leading to a certificate, has been planned and was offered for the first time in the summer session of 1930. The course is designed to meet the needs of teachers in any type of school and is open to teachers with High School Assistants' Certificates, First Class Public School Certificates, or Vocational Certificates, and five years' successful experience in teaching. The latter requirement is set up as it is felt that only persons who have had some experience in teaching youth are in a position to discover and evaluate special abilities, and to offer wise counsel in so important a matter as the selection of a life career.

Part I of the course was given in 1930. The class was made up of twenty-five teachers, with representation from High Schools, Public Schools, and Vocational Schools. Part II of the course will be given in the summer session of 1931.

Some of the schools of the Province have already made a beginning in this important work, by designating one or more members of the staff to give special attention to the matter of guidance and direction. The preparation of a number of teachers in the principles and practice of vocational and educational guidance will enable a larger number of schools to establish guidance facilities.

It should not be overlooked however, that guidance, either vocational or educational, is no new thing in the schools. Good teachers interested in the welfare of their pupils have always done more or less of this work. The special course will simply enlarge their viewpoint and enable them to do it more satisfactorily.

Manual Training Specialist Certificate

The new arrangement of the course for the Manual Training Specialist Certificate, whereby the length of time provided to cover the course was extended from two summer sessions to three went into effect in 1930. The greater length of time required had no deterring effect on the number of applicants registering for the course.

Twenty-six teachers with Ordinary Certificates enrolled in the group, taking Part I in 1930. Parts II and III will be given in the ensuing summer sessions.

Enrolment

The enrolment in Ontario Training College for 1930 was as follows:

	A. RESIDENT COURSES	Men	Women	Total
1. ORDINARY VOCATIONAL:

Extensions

A. The above table of statistics does not take into account the following classes established during the latter part of 1930:

(1) *Special Industrial Classes*:

In Toronto the Boys' School was enlarged by annexing the Allan School building and the teaching staff increased by three. A second school of this type is being considered by the Advisory Vocational Committee.

In September a Boys' School was opened in the former Caroline Street Collegiate building, Hamilton. By the New Year the initial

enrolment of 60 had increased to 194 and the initial staff of 4 to 10. The establishment of a Girls' School in the near future is contemplated by the Advisory Vocational Committee.

(2) *Promotion Classes:*

Auxiliary Class work in Kitchener has been well rounded out by the establishment of two promotion classes, one for boys and one for girls. The mixed training classes previously in operation have been reorganized as junior training classes.

The Hamilton Separate School Board instituted a promotion class for girls and the East Windsor Separate School Board a mixed senior class.

(3) *Training Classes:*

Brantford 1, Fort William 1, Hamilton 1, Niagara Falls 1, Sarnia 1, Toronto 6, Weston 1, York County 3, East Windsor S.S. 1, Hamilton S.S. 2, Port Arthur S.S. 1.

(4) *Sight Saving:*

Ottawa 1, Toronto 1.

(5) *Orthopedic:*

Toronto 1.

(6) *Hospital, Visiting Teacher:*

Kitchener (Freeport Sanatorium) 1, Toronto 1.

(7) Three classes for deaf children in Toronto were recognized as Auxiliary Classes.

B. Auxiliary Class work has been organized in 25 of the 27 cities of Ontario (including the urban area of York County, in 12 of the 21 towns having a school population of more than 1,000 and in four towns or villages having a school population of less than 1,000. Surveys have been recently conducted in one of the two remaining cities, and in four of the nine remaining towns having a school population of 1,000. Very satisfactory progress has been made among urban centres in the institution of special facilities for the training of exceptional children.

Regulations passed in May, 1930, extend these advantages to smaller centres and rural communities by making provision for the establishment of:

- (1) Partial Classes in centres where not more than 12 nor fewer than four pupils of an Auxiliary Class type can be selected. (Several surveys are now under way in connection with the establishment of this type of class.)
- (2) Rural School Classes in rural ungraded or semi-graded schools where from one to three pupils of an Auxiliary Class type can be selected.
- (3) Visiting Teacher Units in school areas of less than 10,000 population for the education of crippled children who cannot attend school.

It is believed that provision has now been made for training all children within the boundaries of the Province who are educable in the sense that they can profit by public school instruction.

Teacher Training

All teachers of Auxiliary Classes are specially trained in a five-weeks' Summer Course. The minimum qualifications of applicants are: (1) Normal

School graduation; (2) three years' teaching experience; (3) a certificate from their Inspector of special aptitude for the work.

Courses are provided for teachers in: (1) Training, promotion, partial, and special industrial classes; (2) sight-saving classes; (3) lip-reading, hard-of-hearing and speech-correction classes; (4) orthopedic, hospital, and sanatorium classes.

Courses one and four were given in the Summer School of 1930. Seventy-five teachers took course one, and twenty-four course four. Of the ninety-nine attendants four were from the Province of Quebec and two from the Province of New Brunswick. It is expected that in addition to course one, course three for teachers in lip-reading, hard-of-hearing and speech-correction classes will be given in 1931. Grade teachers may take advantage of the latter course, to equip themselves for dealing with the problem of speech difficulties in ordinary classes.

Brief courses are being given in the Normal Schools of the Province to acquaint teachers-in-training with methods of dealing with auxiliary type pupils in rural schools.

The Auxiliary Class teachers throughout the Province have been organized into eight associations. The monthly or bi-monthly meetings of these groups are well attended and the teachers are stimulated by (1) discussion of problems, (2) exhibition of craft work, (3) study of new methods. Valuable assistance is rendered by the annual O.E.A. meeting and the Auxiliary Class Teachers' Bulletin.

The Establishment of Classes

In Ontario the establishment of Auxiliary Classes is a matter within the autonomy of local school boards. Advisory assistance, free surveys and grants equivalent to one-half the excess cost of education are provided by the Government. The placement of exceptional children is an affair which requires delicate handling. It is felt that a policy which aims at securing the good will and voluntary co-operation of a community through explaining to the representatives of the public the need of special training for this type of child is productive of more beneficial and permanent results than measures of compulsion. The rapid extension of the work and the fact that only one Auxiliary Class has ever been discontinued is proof of the wisdom of such a policy.

(1) *Physically Handicapped Children*

A happy state of co-operation exists between the Department of Health and the Department of Education in dealing with this type of child. A tacit understanding exists that when the dominant coefficient in a situation is remedial, as, for example, the case of a tubercular child, the medical department assumes responsibility for the care of the patient, hospitalization, clinics, etc., but where therapeutic conditions are static and the chief factor involved is the provision of a training for citizenship the responsibility is assumed by the educational department, the non-responsible department in either case co-operating under advice of the responsible department.

Upon application by the superintendent in charge, classes may be established in hospitals and sanatoria for sick children by the local school board with the approval of the Inspector of Auxiliary Classes.

Upon receipt from a school board of a request to survey a new area for the purpose of establishing an orthopedic, sight-saving, deaf, hard-of-hearing, open air, forest school or visiting teacher class the Director, Division of Child Hygiene, is asked to give a preliminary screening for the purpose of selecting probable

eligibles. The children selected are then examined by a specialist. His report is considered by the local Auxiliary Class Board who with the approval of the Inspector of Auxiliary Classes select a sufficient number of candidates to form a class.

A visiting teacher unit (Reg. X, (1) (f) may be established upon receipt from a school board of a formal application for the same and a certificate from the Director, Division of Child Hygiene, as to the crippled condition of the child.

(2) *Direct Learners*

In case of children requiring the educational facilities afforded by training, promotion, partial or special industrial classes the application of such terms as subnormal, mental defective, etc., are reminiscent of an age of educational fanaticism and pedantic snobbery. A rapidly growing knowledge and a rapidly widening tolerance compel the recognition of many factors and various standards in education. The low scores obtained by these pupils on a Binet Simon examination have a negative and confirmatory significance only. They tell us that these children cannot indirectly through the study of book symbols and the apprehension of theory readily learn to control behaviour. Such children are essentially *direct learners* acquiring control of behaviour through direct contacts with experience. It is hoped that *direct learners* instead of an offensive terminology will be generally employed to designate pupils of this type.

Upon receipt from a school board of a request to survey an area for the purpose of establishing a training, promotion, partial or special industrial class the Department supplies the teachers and school nurses of that centre with record forms and instructs them as to their use. Children retarded two years or more in the upper forms or one and one-half years or more in the lower forms, children who have repeated grades and children whose profiles of achievement are highly irregular are selected for sympathetic study. The teacher then reports on each pupil's educational history, class standing and school characteristics; the nurse and a representative from the Division of Child Hygiene on his medical history, health conditions, home environment and heredity. A trained psychometrist then gives the child a Stanford Binet examination. All three reports are confidentially considered by the local Auxiliary Class Board who with the approval of the Inspector of Auxiliary Classes select a sufficient number of candidates to constitute a class.

(3) A Rural School Class for a child or children of the sight-saving or direct learning type may be established with the approval of the Inspector of Auxiliary Classes upon receipt of a formal request from a school board, a report made out by the teacher and where possible the school nurse upon a regulation form supplied by the Department, accompanied in case of sight-saving children by a certificate from the Director, Division of Child Hygiene, or in case of direct learning children the record of a Stanford Binet examination conducted by the local Inspector or other trained psychometrist.

(4) When a class has been established in any centre, its continuance and the organization of other classes are left in the hands of the local school authorities subject to the approval of the Inspector of Auxiliary Classes.

Conduction of Classes

Since Auxiliary Class pupils have been segregated from the grades because of their inability to make progress under ordinary school conditions, modifications in class organization, methods of teaching and subject matter of instruction become necessary.

(1) In classes made up of physically handicapped children, who later may pursue a collegiate or university education, the ordinary Public School courses are followed. School-room organization and methods of instruction are adapted to the special needs of the pupil and the conservation of his health—pupils are transported to and from orthopedic classes in vans. Special school-room equipment is provided for their conveyal and physical well being. Training exercises in muscular co-ordination form an important part of the daily programme. Sight-saving classes are accommodated in specially lighted rooms and equipped with large-type readers, neutral tinted paper and other sight-saving material. Deaf and hard-of-hearing classes are trained to receive instruction through the medium of lip-reading. Hospital and sanatorium classes are provided with equipment and devices for bedside study.

(2) In training, promotion, partial and special industrial classes for children of the direct learning type the following modifications of usual school-room procedure are followed:

(i) Since these pupils will not proceed to High School Entrance, the horizontal system of classification and promotion by grades has been superseded by a vertical system of classification and promotion by subjects whereby the pupil's progress is kept at a maximum, his special aptitudes advantageously developed and his special weaknesses given adequate attention. A necessary concomitant has been the organization of classes into subject groups rather than grades and the introduction of monthly in place of annual promotions. Individual record forms have this year been supplied the teachers to assist in such organization, and individual monthly report cards to inform parents as to their children's progress.

It has been found impracticable to classify direct learning pupils on the basis of intelligence tests. The low scores here obtained have a negative significance in relation to indirect learning but have little or no positive significance in relation to direct learning. Two children having the same I.Q. may vary widely in capacity.

(ii) This year a tentative programme of study has been outlined in which certain phases of the grades curricula that require indirect, abstract or symbolic processes of thought or that are merely foundational to collegiate courses and have but little practical application in ordinary life, are either eliminated or replaced by more realistic aspects brought down from senior grades or even from secondary school programmes. Thus simplified processes of estimating interest, trade discount, taxes, etc., have been brought down from the Arithmetic of Grade 8 and substituted for common measure, multiples, cancellation in the Arithmetic of Group 6. Literary composition has been largely superseded by such oral and written exercises as will equip the pupil with ability to apply for a position, conduct a business conversation by telephone, etc. An intensive study of home industrial and social geography has taken the place of an extensive course in world geography. In the four secondary schools established for this type of pupil under the Advisory Vocational Committee of the Toronto and Hamilton Boards of Education courses in drafting, experimental physical science, food chemistry, home economics, etc., are being successfully taught by direct learning methods. In the formation of these curricula mental integration, socialization and the ability to function knowledge have been deemed of greater import than the acquisition of academic information.

(3) Since this pupil learns largely by direct rather than by indirect processes, a fair share of his school time is devoted to craft work whereby he acquires not

only manual skill and vocational training but gains control of behaviour through direct response to actual situations. With these ends in view a course in craft work has been outlined by Miss L. H. DeLaporte, Assistant Inspector of Auxiliary Classes.

(4) Since conduct with these pupils is largely a matter of direct rather than considered response, the development of moral, social and vocational habits and attitudes constitutes an important part of their education. Since verbal methods of instruction and negative forms of training are as little likely to be productive of results in social as in academic or vocational education, it would seem essential that both teacher and pupil conceive social behaviour as a progressive series of accomplishments which may be mastered by means of instruction participation and practice in much the same fashion as arithmetic or wood-working. To this end a positive and explicit rather than a negative and incidental programme of training has been provided embracing a system of classifications and promotions in various phases of social efficiency similar to ordinary classifications and promotions in academic and craft-work subjects. Since positive in contradistinction to negative methods of instruction in social behaviour have been the subject of but little recorded experimentation the course submitted is necessarily highly tentative in character but has already been productive of striking improvements among various classes inspected.

(5) Vocational guidance training and placement are prominent factors in the educational programme of senior pupils.

H. E. AMOSS,

Inspector of Auxiliary Classes.

Toronto, February 16th, 1931.

APPENDIX H

REPORT OF THE INSPECTOR OF AGRICULTURAL CLASSES

Public and Separate Schools

Agricultural education is maintained in Forms III, IV and V of the Public and Separate Schools, as an optional subject where School Boards decide to introduce it under the Regulations of the Department of Education. This type of education is becoming more and more popular from year to year, and the work itself improves in character as Boards and teachers become better acquainted with the purpose and scope of the subject.

To secure qualified teachers has been the most serious difficulty in promoting this branch of education. Teachers may become legally qualified in either of two ways: two summer courses of five weeks each, either at the Ontario Agricultural College or at the Kemptville Agricultural School, or a course of four years provided as an optional subject taken in Collegiate Institutes, High and Continuation Schools.

The table given below shows the increase in numbers of schools which meet the requirements of the Regulations and qualify for agricultural grants from year to year:

Year	No. of Schools	Year	No. of Schools	With School Gardens	With Home Gardens
1903.....	4	1914.....	264	208	56
1904.....	7	1915.....	407	222	185
1905.....	6	1916.....	585	324	261
1906.....	8	1917.....	989	466	523
1907.....	2	1918.....	1,020	588	432
1908.....	14	1919.....	1,408	618	790

1910.....	17	1921.....	1,804	690	1,114
1911.....	33	1922.....	2,047	796	1,251
1912.....	101	1923.....	2,288	843	1,445
1913.....	159	1924.....	2,285	831	1,454
		1925.....	2,509	783	1,726
		1926.....	2,802	852	1,950
		1927.....	3,193	981	2,212
		1928.....	3,595	1,059	2,536
		1929.....	3,952	1,077	2,875
		1930.....	4,342	1,308	3,034

Secondary Schools

By secondary schools are meant Collegiate Institutes, High Schools, Continuation Schools and Form V of Public and Separate Schools.

Three schemes are provided for, any of which may be carried on by those schools which decide to do so under the Regulations of the Department of Education as follows:

(1) Optional classes as a four-year course which may lead to Entrance to Normal Schools or to Junior Matriculation. A person who completes the four-year course in Agriculture is entitled to an Elementary Certificate when he completes the Normal School course.

(2) Department of Agriculture under *The High Schools Act*.

(3) Department of Agriculture under *The Vocational Education Act*.

The following schools are maintaining classes under the scheme indicated in (1) above:

Collegiate Institutes—

Barrie, Belleville, Brockville, Cobourg, Cornwall, Fort William, Goderich, Ingersoll, Kitchener, Lindsay, Napanee, Orillia, Perth, Picton, Port Arthur, Renfrew, Runnymede, Scarborough, Smith's Falls, Strathroy, Walkerville, York Memorial.

High Schools—

Amherstburg, Beamsville, Bowmanville, Bracebridge, Brighton, Burlington, Caledonia, Cayuga, Cobalt, Dundas, Dunnville, Elmira, Essex, Fergus, Fort Frances, Haileybury, Iroquois, Kincardine, Kingsville, Leamington, Listowel, Madoc, Midland, Mitchell, Nepean, New Liskeard, Norwich, Oakville, Petrolia, Port Elgin, Port Perry, Ridgetown, Ridgeway, Saltfleet, Shelburne, Smithville, Stamford, Thessalon, Uxbridge, Waterdown, Watford, Welland, Whitby, Williamstown, Winchester.

Continuation Schools—

Agincourt, Belmont, Coldwater, Comber, Drayton, Drumbo, Ilderton, Jarvis, Kinmount, Lobo, Lynden, Lyndhurst, Mindemoya, Minden, Mount Brydges, Mount Pleasant, Pakenham, Princeton, Seeley's Bay, Sparta, Thamesford, Thornbury, Thorndale, Wheatley, Woodville, Wooler.

Public and Separate Schools with Form V—

S.S. No. 7 Biddulph, R.C.S.S.; No. 4, Mornington, R.C.S.S.; No. 3, Mara, Port McNicol Public School, Walkerton Separate School.

The following schools are carrying on under the scheme indicated in (2) above: Drayton, Elmira, Listowel, Mitchell, Port Perry, Wheatley and Whitby.

Under (3) above the following schools are now maintaining classes and qualifying for grants under *The Vocational Education Act*: Beamsville, Renfrew, Ridgetown.

Teacher Training

An Elementary certificate in Agriculture may be obtained by completing two summer sessions of five weeks each, either at the Ontario Agricultural College, Guelph, or at the Kemptville Agricultural School. A teacher who is qualified to teach in any school of the provincial system may be admitted to these summer courses. Such certificate qualifies the individual to teach Agriculture in a Public or Separate School.

An Intermediate certificate may be obtained by completing two summer sessions which are offered at the Ontario Agricultural College, Guelph. A teacher who is qualified to teach Science in a High School may be admitted to this course and the Intermediate certificate qualifies the holder to teach Agriculture in a Public or a High School.

A Specialist certificate in Agriculture may be obtained by those who hold an Intermediate certificate, if they are otherwise qualified, on the completion of a third summer course in Agriculture and a course in Farm Mechanics. A Specialist certificate in Agriculture may also be obtained by the holder of a B.S.A. degree who completes a year's attendance and passes the examinations at the College of Education.

Attendance at Kemptville Agricultural School, Summer Courses in Agriculture

Year	Part I Elementary	Part II Elementary	Total

Normal Schools

A course of instruction in Agriculture, including methodology, is given in each of the seven Normal Schools. This course is particularly effective since the teachers are not only well qualified, but enthusiastic and zealous in carrying on the work. Three of the teachers hold Specialist certificates and four, Intermediate certificates in Agriculture.

Candidates for First Class certificates receive practically the same course of instruction in Agriculture as those in training for Second Class certificates. Some changes will be made when the two-year course is well under way.

Comments from Trustees and Others

The following statements taken from the annual reports submitted to the Department of Education, indicate to some extent how the subject is appreciated by those actually concerned.

S.S. No. 12, Williamsburg.

Pupils take more interest in the subject when it relates directly to their own farms. Beautifying the grounds causes the pupils to copy at home.

TRUSTEES.

S.S. No. 7, Winchester.

We were pleased to receive the first prize donated by Chief Inspector Greer and it was the universal opinion that we deserved it. Tourists passing stop and examine and admire our beautiful window boxes. We hope to do greater things in the future as the people of the section seem to be more interested each year.

TRUSTEES.

S.S. No. 11, Woodhouse.

We have examined the school garden and find it in first class shape. It consists of corn, peas, beans, carrots, beets, onions and a score of other things, and they are certainly looking fine.

THOS. DUNBAR, }
L. BELBECK, } Trustees.
THOS. REYNOLDS }

S.S. No. 1, Smith.

The teacher and children take a real interest in their school garden.

TRUSTEE.

S.S. No. 11, Smith.

We have a splendid school garden and a lovely bed of flowers, full length of the south side of the school. Also a beautiful flower-box in each window, and a couple of other beds all of which are well kept and with lawn mowed through the season, adds a great deal to the school.

TRUSTEES.

Arkona Public School.

It affords the writer extreme pleasure to pass comment on the Agricultural work carried on at the school. The grass is cut when needed, shrubbery being planted. The tulip bed is still the talk and admiration of the town. This bed is now planted with a variety of flowers taken from the hot bed.

The grounds now have the neatness and attractiveness of a city park.

We, as Trustees, feel justly proud of the interest taken by our staff.

JOHN BROWN, Chairman.

Fort Frances Public School.

I may say the work is most worthy of commendation and the garden, both vegetables and flowers, is excellent. Much time has been spent by the pupils in their little gardens, and arrangements are made with the janitor for the care of the garden during vacation.

C. F. EWERS, I.P.S.

J. B. DANDENO,
Toronto, January 2nd, 1931. *Inspector of Agricultural Classes.*

APPENDIX I

**REPORT OF THE INSPECTOR OF MANUAL TRAINING
AND HOUSEHOLD SCIENCE****Manual Training Centres**

Manual Training to the number of 130 centres is now established in the following towns and cities to the extent shown: Brantford 2, Bridgeburg 1, Chatham 1, Collingwood 1, Fairbank 1, Guelph 1, Hamilton 15, Ingersoll 1, Kingston 1, Kitchener 2, London 9, North Bay 1, Orangeville 1, Ottawa 16, Owen Sound 2, Pembroke 1, Peterborough 3, Port Perry 1, St. Catharines 1, Sarnia 3, Stratford 3, Toronto 49, Walkerville 3, Waterloo 1, Windsor 8, Whitby 1, Woodstock 1.

Household Science Centres

Household Science to the number of 129 centres is now carried on in the following towns and cities to the extent shown: Brantford 2, Bridgeburg 1, Brockville 1, Chatham 2, Cobourg 1, Collingwood 1, Fairbank 1, Guelph 2, Hamilton 16, Ingersoll 1, Kingston 1, Kitchener 2, London 10, New Liskeard 1, North Bay 1, Ottawa 8, Owen Sound 2, Peterborough 3, Port Perry 1, St. Catharines 1, Sarnia 3, Stratford 3, Toronto 50, Walkerville, 3, Windsor 8, Woodstock 1, Waterloo 1.

General Situation

Since the date of my last report Manual Training and Household Science have been discontinued in the Collegiate Institutes of Brantford and Chatham and the High Schools of Sudbury and Weston, and the equipment absorbed into that of the Technical Schools of those places. The following additional centres have been opened during the year: Swansea Public School; King George School, Walkerville; Hugh Beaton School, Walkerville; Cameron School, Windsor; Central School, Hamilton; Westdale Collegiate Institute, Hamilton; Brockville Collegiate Institute; Dovercourt Public School, John Fisher Public School, John Ross Robertson Public School, Duke of York Public School, Brock Avenue Public School, Toronto, making a total of twelve.

The character of the accommodations provided in these new centres is generally much in advance of those previously established. The equipment is being standardized, all essentials are being included and the non-essentials are being rigorously excluded.

While this shows a gratifying increase, it will be noted that the growth is mainly in large towns and cities. The desirability of making some provision for manual arts instruction in the smaller towns and rural districts is becoming somewhat urgent.

In extending the work to these smaller communities the following considerations seem involved:

(1) The provision of adequate grants. The present grants for Manual Training and Household Science were established many years ago. Since that time the cost of buildings, accommodations and equipment has materially increased and the grants, which at the time of establishment were entirely adequate, have become quite insufficient and are not proving sufficiently attrac-

tive to induce Boards to consider the introduction of these subjects from a financial point of view.

(2) Grouping of Centres. It should not be difficult to form a group of three or four towns within easy reach of each other, each having its own Manual Training and Household Science centres and equipments and each paying its share of the special teachers' salaries, according to the time spent in each place by the teacher. The Government grants would materially aid in providing the equipment in each of these centres. Now that radial and bus lines are being extended rapidly throughout the Province, little difficulty would be experienced by the teachers in getting from place to place. This plan has been proposed in one or two localities, but it has not yet been possible to get concerted co-operative action between three or four different educational authorities, largely owing to conflicting interests which are often more imaginary than real.

(3) The provision of teachers with a double qualification. The small High School cannot provide sufficient pupils to employ the whole time of a Manual Training teacher or a Household Science teacher. If a small group of teachers could be qualified for teaching the academic subjects of the High School curriculum in addition to Manual Training or Household Science, the introduction of these subjects would be much easier and the whole time of the teachers could be occupied. The lack of such doubly qualified teachers has been felt in many schools and permits for teaching Household Science have had to be granted to teachers in Port Perry, New Liskeard and Mitchell.

(4) The revision of the High School Course of Study in Manual Training. There now appears a desire and need for additional activities and the inclusion of new materials. This desire is prompted by three factors:

(a) Formal Woodworking has become somewhat commonplace and its newness and attractiveness has to some extent worn off, particularly in classes taught by teachers lacking vision and initiative in devising new projects.

(b) Industrial conditions have changed and have relegated wood and wood-working to a less important position.

(c) The interest of the boy affected by these factors demands a much broader scope of activity.

(d) The recognition of the need for exploratory opportunities touching a wider range of mechanical work and a more extended use of the newer materials.

Home mechanics and the activities of the home and farm afford a basis for much new matter and many new activities that might well be introduced into Manual Training courses, provided conditions were favourable.

The following is a list of problems amongst many others that might well be included in a Manual Training course for boys of a High School age: Making some concrete, repairing furniture, tinning a soldering iron, soldering, repairing a mortise lock, glazing a sash, repairing a leaking tap, cleaning a drain trap, wiring a bell, hanging a door, reading a water, gas or electric meter, repairing a hole in a plastered wall, making window screens, painting, reseating a cane-bottom chair, making a sugar scoop from a tin can, filing a key for a mortise or Yale lock, sharpening and adjusting a lawn mower, cutting and threading a piece of pipe, making an electric magnet, repairing an electric iron.

(5) Provision of more time for the work. It is to be regretted that the time available for the work in Manual Training and Household Science is so limited. Two hours each in a few cases, but in the majority only one and a half hours is

all that is available. In addition to the subjects enumerated above, there are so many things that should be taught in connection with the subject, but there is not time available. One of the weak points of instruction in handwork, whether it be given in the class-room or the handicraft room, is its severance from life and traditions. The pupils learn to do things but they do not learn how their craft is connected with the craft that built our houses, constructed our furniture and made our clothes, nor do they learn anything about the tradition of great names and great achievements that lie behind it. The fact is that every craft has in the course of time acquired a "culture" of its own, and owing to its development through the ages has come to be what it is to-day.

(6) The provision of a new type of equipment. In order to carry on work of an extended nature such as above referred to, some changes in the traditional equipment will have to be made. The kind of equipment will be that known as the general shop, now being largely adopted in the Junior High Schools of the United States. Here provision is made for woodwork, sheet-metal work, plumbing, electricity, forging, auto mechanics, machine shop and draughting. The organization of the work will, of course, be somewhat different. Instead of all the class being engaged in one occupation at the same time, the classes will be divided into groups, each group engaged in a different activity under the control of one teacher.

(7) Co-operation between the manual arts and industrial education. An arrangement should be made so the shop may be used both for ordinary High School pupils and pupils taking a Vocational course. In the small High School the equipment needed will be practically the same and in order that the teacher may be fully employed and the shop and equipment continuously used, pupils of both departments should be allowed to use the facilities provided.

The growth of home work through the influence of sympathetic teachers has made remarkable progress. Many home workshops are being fitted up and the practice of giving boys serviceable tools for Christmas presents is becoming more general. This brings the work closer to the home and reacts favourably all round. Many household repairs and operations are now being performed by the boys, such as hanging screen doors, fitting storm windows, fixing shades, repairing broken windows, locks, tables, etc., putting new washers in leaking taps, connecting up electric bells, irons, lights, and adjusting shades, etc. Some schools have drawn up a list of more than a hundred minor operations round the home which any intelligent boy or girl ought to be able to perform.

In one school the boys were engaged in the repair of damaged toys, a large number of which were sent in by a manufacturer. These consisted of trains, automobiles, wagons, horses, animals, games of all kinds and moving mechanical figures. The majority of these were made into really serviceable toys and were sent to the Sick Children's Hospital and other institutions. This work has both ethical and educational values and the amount of ingenuity and resource displayed by the boys, and the thought involved, plays a large part in the development of character and those qualities which contribute to a successful life.

The aid now being given to Manual Training Instructors by various manufacturers of lumber, finishes, tools, etc., has grown to a remarkable degree. Charts, working drawings, processes of tool manufacture, blue prints, books of instruction, etc., are available for the use of both pupils and teachers for the asking and the teachers generally are making the fullest use of them.

Another feature of the work which is receiving more attention is the reading and understanding of technical or semi-technical literature. In some schools, subscriptions are taken at a reduced rate for "Popular Mechanics," "Woodworker,"

radio magazines, and various other publications dealing with construction, tools, timber, etc., and the aid of the teachers is being constantly sought in making of various objects outlined in these publications. The boys are encouraged to keep scrap books in which are kept various interesting articles and illustrations culled from newspapers, magazines, etc., dealing with constructive problems, and the collections made by some of the boys are exceedingly useful and informative.

Character of the Work in Household Science

The Household Science work done in the Public Schools falls naturally into two divisions, first that done in the class-room by the grade teacher and second that done in the Household Science room by teachers who in addition to the Second Class Certificate hold a Household Science Certificate obtained after one year's attendance at the College of Education or two years' attendance at the Macdonald Institute, Guelph.

In the larger towns and cities such as Toronto, Ottawa and Hamilton, the work in the lower grades is thoroughly well organized and taught. A definite stated time is provided on the time table and the course is well graded. In these places the work is well supervised and the teachers of the grade classes receive instruction as to the kind of work and methods of instruction. In the smaller places the work is not so well organized and the work is left largely to the initiative of the individual teachers, but a large amount of good practical work is being done.

The Household Science rooms in the centres previously enumerated are well equipped and very practical instruction is being given. Every effort is made to encourage home practice and the pupils in a large number of cases bring their home problems to the teacher of Household Science for solution. The parents, too, are making greater use of these classes by seeking the advice of the Household Science teacher. Many schools have instituted a parents' day each term when the parents are invited to visit the classes and see their children at work. On these occasions refreshments prepared by the children are served and in this way the interest and co-operation of the home is secured. The practice is growing of cooking in larger quantities instead of using the small amounts that were previously the practice. The family meal is being made the basis of instruction and in this way more direct contact is made with the home. Many teachers require the pupils to give a short account of the work they have done in the home during the previous week and it is surprising to hear the amount of help they have been able to render their mothers. Attention is being paid to the right kind of food, health and weight, and many pupils have received considerable benefit in this connection. Attention is being given not only to cookery in these classes but also to sanitation, general care of the home, decoration, manners, the right kind of dress and the ability to perform many mechanical operations that are necessary in the daily routine of housekeeping.

When it is remembered that at the most, two hours a week, and in the majority of cases only one and a half hours are given to this work, the progress being made is very gratifying. The work being done in the High Schools is, as would be expected, of a more advanced and practical character, particularly in those cases where there is a well-graded course in the Public Schools.

Pupils in the First and Second Forms are receiving instruction and being taught to assume responsibility in the management of a home which they will find of great service.

Rural Schools

During the past two years Manual Training and Household Science have made considerable progress in rural schools and those urban schools that are unable to avail themselves of the provisions of the general regulations.

The best method of approach to Household Science in the rural school is through the medium of the hot noon-day lunch or the preparation of one or two hot dishes to supplement the lunch brought from home. Owing to the fact that many pupils live far from the school, it is impossible for them to go home for the mid-day meal, and they are thus dependent upon lunches which they bring with them. Very frequently the pupils are allowed to eat their lunches where and how they please, and the method chosen is conducive neither to comfort nor health. In fine weather they do not wish to lose any time from their games, and so they eat their food while playing, or they bolt it in order that they may get to their play more quickly. In severe weather they crowd around the steps or the stove and do not hesitate to scatter crumbs and crusts. In one case even a teacher has been seen holding a sandwich in one hand and writing on the blackboard with the other. There are now over 1,200 schools serving at least one hot dish at the noon lunch, and the almost unanimous experience of the teachers in these schools is that the health of the children is improved, that they are able to do better work in the afternoon and that their attendance is more regular. One outstanding advantage is that the pupils are under proper supervision during the noon hour and moral and physical injury is prevented.

As has been previously pointed out, the extent and character of this work depends very largely upon the interest taken by the Public and Separate School Inspectors. The number of classes in various outstanding inspectorates are shown as follows: Bruce East 33, Bruce West 31, Carleton East 25, Dufferin 29, Dundas 30, Glengarry 28, Grey South 29, Grey West 27, Lanark 26, Leeds and Greville (2) 47, Lincoln 60, Muskoka 22, Nipissing 22, Northumberland and Durham (3) 32, Peel 27, Renfrew South 47, Wellington South 55, Wentworth 67, York (3) 22.

There is a total of 1,267 Rural Public Schools including 1,507 classes teaching Household Science and 1,202 of these are serving a hot dish at the noon lunch. Fifty-two Separate Rural Schools with 82 classes are teaching the subject and 47 are serving a hot dish at the noon lunch.

There are 113 rural schools with 241 classes being taught Manual Training and 64 of these classes are in Wentworth County.

Training of Teachers

The plans now in operation for the training of teachers in Manual Training and Household Science are working very satisfactorily. The certificates issued in each subject are of three grades: (1) Elementary, (2) Ordinary, (3) Specialist. The term "Ordinary" as applied to these certificates has been in use for many years but owing to its implications it is not at all satisfactory. It might well be changed to "Intermediate."

The Elementary Certificate is obtained by attendance at two Summer Schools each continuing for five weeks. These courses are now given at the Industrial Training College, Hamilton, and have up to the present been well attended. Summer Courses were also held in Ottawa.

In order to give opportunity to rural school teachers to obtain the Elementary Certificate during the school year, Saturday classes have been held at Hamilton Normal School. These classes have been held for several years and

the present classes have a large attendance. All the teachers attending these courses are actually in service in the rural schools of the Province and the work taken deals entirely with the requirements and possibilities of the rural schools with reference to Manual Training and Household Science and the serving of a hot dish to supplement the lunch brought from home. The students almost invariably do good work and leave with the expressed intention of introducing the subject, if at all possible, into their schools the following year.

Early in the present school year a request came in from a number of Public School teachers in the City of Toronto and in rural schools surrounding the city for the establishment of similar classes in Toronto. As a result, five classes in Manual Training and two in Household Science were commenced on Saturday, November 15th, and will continue for twenty-five Saturdays. One hundred and sixty teachers are now attending these classes from 8.00 a.m. till 1.00 p.m. each day.

The Elementary Certificate obtained by attendance at these Summer and Saturday Courses qualifies the holder to teach the subject in rural schools and those urban schools which are unable to comply with the provisions of the General Regulations, but it enables the holder to enter the one-year course qualifying for the Ordinary Certificate in January instead of the previous October, thus saving time and expense. A growing number of teachers are availing themselves of this opportunity. The Ordinary Certificate in Manual Training is obtained by taking a one-year course at the Industrial Training College and that in Household Science at the College of Education, or by a two-year course at the Macdonald Institute, Guelph.

The Specialist Certificate is obtained by attendance for three years at the Summer Courses held at the Industrial Training College, Hamilton. These courses which are given for five weeks are open only to the holders of the Ordinary Certificate. They continue for eight hours each day. The results of the extra training these teachers receive is shown in the improvement of the instruction being given in the schools and School Boards are showing recognition of this additional qualification by giving increases in salary.

The Specialist Certificate in Household Science is obtained through a four-year course at the University of Toronto.

A. H. LEAKE,

Inspector of Manual Training and Household Science.

Toronto, December, 1930.

APPENDIX J

REPORT OF THE PROVINCIAL SCHOOL ATTENDANCE OFFICER

Education is the bedrock upon which not only individual character and success but national progress and national security rest. Personal experience has brought the former fact home to the common mind, and under pressure of modern competition the larger truth is being ever more forcibly impressed. In the light of the fact that public institutions are largely based upon and administered under the popular will, that will must function at its best, if the strength of the nation is not to be wasted on a fruitless struggle of faction with faction and mass with class, and mediocrity or possible failure be the national lot.

The key to intelligent citizenship is the open school door, that is to say, educational opportunity for all. It is with this principle, viz.: the nation-wide distribution of educational values, that supervised attendance is concerned. But it is one thing to admit the principle and quite another to have it realized in practice. Difficulties of various kinds obtrude themselves in the operative phases of the effort. Parental apathy or indulgence, pre-occupation with other interests, poverty, physical and human handicaps, may bar the way. These and kindred causes open the gateway to illiteracy with its natural train of social and economic evils which menace home, society and state. It is just here that organized effort must rise to combat these conditions. This effort has taken practical form in a province-wide system of attendance supervision, supplemented by public health and welfare work each operating in its own sphere but making common contribution to the end of a wholesome, intelligent, law-abiding citizenship.

How effectively the school attendance organization is meeting the challenge is outlined in the following pages:

TABLE I
School Enrolment in Relation to Provincial Population (1929)

		Total Enrolment	Percentage of School Population	Percentage of Provincial Population
Elementary Schools:				
Public.....	540,558	646,076	80.1	20.2
Separate.....	105,518			
Secondary Schools:				
Collegiate Institute and High Schools...	64,964	104,593	13.0	3.2
Vocational.....	29,095			
Continuation.....	10,534			
Evening and Summer Schools:				
Public.....	3,369	55,439	6.9	1.7
High.....	3,560			
Vocational.....	44,431			
Summer.....	4,079			
		806,108	100.0	25.1

The above table shows that over twenty-five per cent. of the general population of Ontario is enrolled in our provincial schools. The enrolment in the elementary schools has increased by 4,948, that in the secondary schools by 10,920, and in the evening schools by 3,293 in the past year.

A striking feature is the large and increasing enrolment in evening and summer schools, which reveals the readiness of the adult population to improve their education when the opportunity is offered.

School Enrolment in Relation to Maximum Number Living as Shown by Life Tables

FIGURE 1

GRAPH OF TOTAL SCHOOL ENROLMENT, ALL SCHOOLS, ACCORDING TO AGE, 1929

Dotted columns—Elementary Schools

Thatched columns—Secondary Schools

A-B Line showing normal number living at each age according to American Life Tables.

Figure 1 above shows, in the dotted columns, the numbers in the successive ages 5 to 18 enrolled in the Elementary Schools, with the thatched sections superimposed thereon showing the numbers in the Secondary Schools, ages 10 to 18. The line A-B represents the normal numbers living at each age according to indexes derived from American Life Tables plotted for a population of 3,250,000, which was the approximate population for Ontario in 1929.

Interesting facts emerge from a close analysis of this figure:

(1) The visible rise of the curve of school enrolment over the line A-B, marking the normal number expected to be living at each age, is accounted for in part by the lower mortality rate in northern as compared with southern latitudes. It shows that Ontario is evidently taking care of its entire body of citizens in the making.

(2) The wave line a-b furnishes an interesting reflection of war times. The point x marks the highest point and y the lowest point of the birth rate, the latter during and the former immediately following the war. By the year 1929 the wave had just reached the stage indicated by the curve of school attendance. The very marked recession in the birth rate during the four years of war and the corresponding increase in the years immediately following are clearly defined.

(3) Only one-half of the children of five years of age enroll in the regular day schools. In large urban schools part of the balance is enrolled in the Kindergarten. Up to the age of 14.8 years of age the full quota of our youth are cared for in our regular schools, as shown at the point z, where the curve of enrolment crosses the maximum number line A-B.

General Conditions of Elementary School Attendance

FIGURE 2.

SCHOOL ENROLMENT IN
RELATION TO AVERAGE
ATTENDANCE AND
PROVINCIAL POPULATION

a-b—Total enrolment in
Rural Elementary Schools,
1909-1929.

b-c—Total enrolment in
Urban Elementary
Schools, 1909-1929.

c-c—Increase in enrolled
attendance of Elementary
Schools, 1909-1929.

d-d—Increase in pro-
vincial population reduced
to a common base with c-c.

The above diagram furnishes a comprehensive study of the movement in the elementary school population, urban and rural, and of its relation to the growth in provincial population in Ontario throughout the past twenty years, 1909-1929.

The thatched sections of the columns indicate the proportion of children receiving an average education, the black sections the proportion that fall below that average in urban and rural schools. In 1929 the standard of attendance

efficiency for rural schools was 68.3% as compared with 74.4% in urban municipalities. In twenty years there has been an increase of 14.3% in rural efficiency and of 12.5% in urban. The wave line d-d is plotted to show the rise in general population, reduced for purposes of comparison to the same base with school enrolment. From a detailed study some interesting facts emerge. The general population rose gradually from 1909 to 1915, the school enrolment keeping consistently abreast of the rise. The sudden drop in the former in 1916, 1917 and 1918 is accounted for by the heavy drafts in the adult population to the seat of war, while the school population remained static. It is worthy of notice that the rapid advance in general population from 1919 to 1929 was out-distanced by school enrolment, showing that stricter enforcement of attendance under the new Attendance Act of 1919 was bearing fruit. The full quota of increase in population was cared for and numbers were gathered in that had hitherto escaped the dragnet of attendance supervision.

FIGURE 3

CURVE OF PROGRESS IN ATTENDANCE—ELEMENTARY SCHOOLS

A-A—Percentage of average to total enrolment 1919-1929, District Rural Schools.
B-B—Percentage of average to total enrolment 1919-1929, County Rural Schools.
C-C—Percentage of average to total enrolment 1919-1929, All Urban Schools.
a-a, b-b, c-c—Corresponding Percentages based on relation of Actual to Possible Aggregate.

The movement of rural as compared with urban population in this twenty-year period furnishes an interesting study. It will be noted that in 1909 rural and urban school populations were in even balance at about 240,000. From 1909 the rural population steadily declined, with a slight reaction in 1914 and 1915, until the close of the war. It revived slightly after 1919 and closed in 1929 practically on a par with what it had been twenty years before. Meantime the general population had increased by over three-quarters of a million, the urban centres absorbing the entire increase. Thus, while the rural school population has remained at a standstill at about 240,000 for twenty years, the urban school enrolment increased from 234,787 to 402,227 within the same period.

School attendance is the foundation stone of school efficiency. The teacher holds the primary place among the school forces, but the teacher who neglects this basic factor will meet with disappointment, if not failure, in his effort. However skilful the teacher, however complete the equipment, however nicely balanced the programme, his power cannot function beyond the level of the attendance standard. School attendance is the balance wheel in the school machinery. Shifting movement puts the machine out of gear, reduces the output and mars the product.

The above Figure 2 shows a consistent upward movement in attendance efficiency for all grades of elementary schools. Notwithstanding that rural pupils have much greater handicaps to contend with than urban pupils, the attendance standard is only 6.83 below that of urban schools. The financial depression of the past two years has reflected itself in school attendance. There was larger call for home help, especially on the farm where, in many cases, every ounce of producing power was necessary to the maintenance of living conditions. Notwithstanding this fact, a distinct rise in the standard of attendance is registered in every class of school.

TABLE 2
Comparative Statement of Enrolled Adolescents, 1928 and 1929

	Form I	Form II	Form III	Form IV	Form V	Totals	
						1927	1928
Elementary Schools, 1928....	664	2,228	12,572	37,124	3,847	56,435
" " 1929....	497	1,865	11,552	38,863	4,116	56,893
	1st and 2nd years		3rd and 4th years		5th year		
Secondary Schools, 1928.....	33,189		8,284		197	41,670
" " 1929.....	34,353		8,826		216	43,395
						98,105	100,288

It will be noted that the general shift of pupils of adolescent age is upward. The year 1929 shows a total decrease of 1,540 in Forms I to III in elementary schools, and an increase of 2,008 in the higher grades. In the secondary schools there was an increase of 1,726, making a net increase of registered adolescents of 2,194 in 1929 over 1928. This is a desirable trend, as too large a proportion were marking time in the elementary grades.

Under enforced school attendance it is conceded that, at times, exceptional conditions will call for special treatment. The permissive clauses of The Adolescent School Attendance Act make ample allowance for this. Proven need of help in the home or through gainful occupation elsewhere is never denied where the condition cannot otherwise be met. A child under the age of fourteen

TABLE 3
Comparative Statement of Employed Adolescents, 1929

	Child Employment (under 14 years)		Adolescent Employment (14 to 16 years of age)					
	Six Weeks' Permits		Home Permits		Employment Certificates		Totals	
	1928	1929	1928	1929	1928	1929	1928	1929
Rural Schools.....	159	1,188	511	302	437	479	948	781
Urban Schools.....	82	177	1,026	886	4,207	3,888	5,233	4,774
Totals.....	241	1,365	1,537	1,188	4,644	4,367	6,181	5,555

years, under emergent conditions such as illness in the home, temporary cessation of income, or pressing farm needs, may be released for six weeks. From the above table, in the year 1929 1,365 permits were issued to such children as compared with 241 in 1928. The excess in 1929 is accounted for by the fact that, in order to protect the child from needless loss of schooling, farm help was more fully covered by home permits in 1929 than in 1928. The drop in adolescent totals of 626 in 1929 as compared with 1928 is due mainly to the fact that under economic pressure employers dispensed largely with unskilled labour.

By referring to Tables 2 and 3 above, it will be seen that out of a total of 100,299 pupils of adolescent age, 5,555 were granted school exemption, or 5.5%, as compared with 6,181 or 6.3% in 1928. It speaks well for the good judgment of both parents and attendance officers that so limited a number are released from school under working concessions.

TABLE 4
Part-Time Classes for Adolescents, 1929-1930

	No. of Teachers		Enrolment		Total
	Academic	Vocational	On Home Permits	On Employment Certificates	
Brantford.....	..	5	5	30	35
Galt.....	1	5	5	131	136
Guelph.....	1	2	3	122	125
Hamilton.....	4	5	165	443	608
Kitchener-Waterloo.....	4	7	46	123	169
London.....	2	4	24	64	88
Toronto:					
Vocational.....	11	20	114	690	804
Public.....	1	..	113	231	344
Grand Totals, 1929.....	24	48	475	1,834	2,309
Grand Totals, 1928.....	18	37	506	1,988	2,494

Out of a total of 5,555 school exemptions, as shown in Table 3, 2,309 pupils are enrolled in part-time classes. The difference is accounted for by the fact that urban centres under 5,000 in population are not required to provide part-

time classes. The number of classes has increased by the addition of Brantford, Galt and Guelph to the list. Part-time classes are designed to implement the limited education of pupils who, through conditions outside their control, are thrust into the working world at an immature age. The pupils are distributed among widely varying day occupations as follows:

Trade and Industries.....	479
Commercial Occupations.....	272
Labour.....	150
Factories.....	206
Errand Messenger Service.....	123
House Workers.....	480
Other varied occupations.....	599
Total.....	2,309

They gain much from their school connection besides academic instruction. In the teacher they have a sympathetic adviser who gives them direct assistance in their occupational problems, and they are retained under the steadying influence of home and school until their judgment matures and they acquire the habits of self-dependence and self-control so valuable in their relationships in larger life.

1929.....	112	32	25	30	87
Total: 1928	740	14	25	80	119
1929.....	780	44	176	206	426

The number of complaints and convictions shows a noticeable increase in 1929 over 1928. This is in part due to the insistence on more exact recording and, in part, to closer checking of violations of the Attendance Acts. In 1929, out of a total of 780 complaints, 426, or 54.6%, issued in convictions. Frequently in cases of parental negligence judgment is suspended conditional upon promise of improvement. In the larger centres the probation officer is a helpful intermediary between the Court and the home. Out of a total enrolment of 520,666 pupils of compulsory school age, not more than three cases of infringement of the Attendance Acts for every 2,000 pupils had to be referred to the courts for solution, and fewer than one-fourth of these issued in conviction on the count of parental negligence.

The splendid co-operation and support of the Children's Aid Society, Big Brothers, Big Sisters, Neighbourhood Workers, Social and Welfare Workers and Relief Officers are acknowledged. They have readily lent their services in the solution of many difficult problems in home and school adjustments, and thus indirectly have protected the children in their right to an adequate education.

The New Child Accounting System

The ultimate test of any system of attendance supervision is the certainty with which it accounts for every child of school age in the province and brings him within the range of school facilities. It must not only unfailingly detect the non-attender and the casual comer, but it must restore him to his place in school and tend thereby to build up in him the contrary habits of promptness and dependability. This the new plan aims, in a special way, to do. The teacher is the chief accountant. From her vantage ground of access to facts she must hold the key position in the system. Day by day she notes and records the absentees, canvasses reasons for absence and, on the basis of her findings, segregates the unexcused from the lawful absentees and concentrates effort on the former with a view to their restoration to regular attendance. In the task she enlists the co-operation of the school health nurse and the attendance officer in all cases that come rightly under their control. Month by month her card-indexes bear the totals of loss under six standard causes, viz.: Illness, Home Help, Parental Neglect, Physical Obstacles, Truancy, and Privation. Through these collected data the teacher has a clearly defined picture of the local attendance conditions and may measure present attainment by past as a stimulus and guide to further advance. These summarized data for urban and rural schools find their way to provincial progress records and again enable the Department to interpret the general conditions, devise new plans in the light of the facts, and marshal the forces for further improvement. In addition thereto, monthly surveys of inspectorial units give direct contact of the provincial office with the local areas and salutary measures are adopted to secure immediate betterment and to maintain the standard of attendance at the maximum possible.

What was once vague and indefinite knowledge of conditions with equally ineffective and apathetic action on the part of the attendance forces has been changed to clear-cut knowledge and to definite and in most cases conclusive action by the officers. To fully appraise the scheme is a matter of time, but the following results are clearly in evidence:

- (1) A fuller appreciation on the part of teachers and inspectors of the value of school attendance as a factor in school efficiency.
- (2) A finer co-ordination of attendance forces in the local field.
- (3) A speedy stepping up of attendance standards.

Many inspectorates, and in a few cases entire counties, have attained a standard of more than 90% for rural schools for the year 1930. In some cases rural schools are threatening to outclass the urban. This is a very distinct advance on the attendance status for 1929, where the general average was only 74.4%. Inspectors state that the benefit derived in school efficiency has been greater than from any other source and has had a stimulating effect not only on the general progress of the schools but upon the educational spirit of the communities at large.

Caring for the Full Quota

In a province where the range of territory is so wide and the geographical conditions so diversified, regular school facilities will often fail to answer the conditions. Isolated homes and settlements on the frontiers must be cared for by other means. Correspondence Courses and Railway School Cars are reaching out a helping hand to hundreds of these homes and are doing their part, in association with the regular facilities, in laying the foundations of character and wholesome citizenship upon which alone community and national progress must depend.

J. B. MACDOUGALL,
Provincial School Attendance Officer.

Toronto, December 31st, 1930.

APPENDIX K

REPORT OF THE ACTING INSPECTOR OF PUBLIC LIBRARIES

Since the death of the late Inspector of Public Libraries each member of the staff has accepted gladly any additional duties and carried them through to a successful issue.

At the beginning of 1931 we were again reduced in staff by the resignation of Miss Dorothy Thompson, who has accepted a position with the University of Toronto.

The following is a brief outline of our activities during the year.

Libraries Visited

More libraries have been visited than for many years. Meetings of library boards have been attended. Instruction has been given in the work of classifying and cataloguing. Many small libraries have been aided, and in deserving cases small special grants have been given, and the work in general pertaining to the public libraries of the Province has gained momentum.

Publications

The Ontario Library Review has been published quarterly and is sent to the members of every library board in the Province. It has a growing circulation, and only recently enquiries have been received from South Africa and Australia asking that back numbers of the Review be sent to them. It is a splendid medium for reaching those interested in library work, and the topical papers and news items in it keep even those living in remote sections in touch with the work carried on in the larger centres.

Library Institutes

Two library institutes were held in 1930. The first at Ottawa on October the 16th and 17th, and the other at Walkerville on December the 15th and 16th. For the Ottawa Institute, seventy-three libraries were invited to be represented, and at the Walkerville Institute, one hundred and eighteen libraries were requested to send delegates. The Department paid all necessary railway and hotel accounts for those attending.

These were the first library institutes held in the Province in eight years, and the enthusiasm manifested at both the meetings was so great that it is the intention of the Department to hold others in different sections during the late spring, so that eventually every one of the five hundred and fifteen libraries in the Province will have had a chance to attend the meetings.

The Department realized that Institute meetings were of great benefit to the library workers, and more especially for the smaller and isolated sections where visits were infrequent and where new library ideas and help could be given only through the mail or by personal visits. At the Institute meetings, librarians and library workers are brought together, ideas exchanged, help given, and the librarian who may think her library problems peculiar to her

particular community, may very often find others in the district in similar circumstances. Difficulties are solved, and each goes back to her respective station helped and better equipped for what is very often a rather thankless task.

Travelling Libraries

The travelling libraries show an improvement, but are not yet up to what we consider our standard owing to the need of more room. At least twice the space now available is required in order that the work may be performed with better satisfaction to this office and our patrons. There is need also for better facilities for handling the work. A decided improvement is noted in the greater circulation of classed books.

Summary

We have now five hundred and six libraries on our active list as compared with five hundred and twenty-two of a year ago. The apparent decrease is accounted for by the fact that sixteen association libraries that have not reported for a number of years, and that have been kept on the list in the hope that reorganization would take place, have been removed. They are as follows: Assiginack, Beachville, Burnstown, Capreol, Hastings, Hawkesville, Hillview, Londesboro, Luton, Maple, Markstay, North Cobalt, Rainy River, Sonya, Speedside and Wesleyville.

Nine new libraries were organized during 1930. Two of these were branches of free public libraries, and seven were association public libraries. They are as follows: Free libraries—Hamilton, Mountain Branch; Toronto, Runnymede Branch. Association libraries—Bond Head, Callander, Dunvegan, Havelock, Hickson, Maxville, and Wellburn.

Two association public libraries were transferred to the list of free public libraries: Oil Springs and Tobermory.

The circulation of books in the free and association libraries of the Province has increased by 588,474, it being now nearly eleven and a quarter million.

A number of new library buildings were opened during the year, a notable example being the library at Newbury. This building was erected as a memorial to the late William Bayne, by his widow and family, and presented to the Village of Newbury.

The coming year promises even greater activity, as there are several enquiries already regarding plans, prices, etc., of library buildings.

A statement of the statistics of the libraries of the Province follows.

S. B. HERBERT,

Acting Inspector of Public Libraries.

Toronto, January 21st, 1931.

APPENDIX L

REPORT OF THE SUPERINTENDENT OF THE ONTARIO
SCHOOL FOR THE BLIND

Attendance

The average attendance for the school term ending June, 1930, was 130. At the opening of school in September, 1929, there were 126 pupils enrolled. Eight pupils entered during the session which brought the total up to 134, of which number 74 were boys and 60 were girls. The total registration from October 31, 1929 to October 31st, 1930 was 157—two less than in the preceding year. School opened in September, 1930, with 125 pupils in residence.

In September, 1930, thirty-two of the pupils who were at school during the term did not return. Of these there were 19 boys and 13 girls. They did not return for the following reasons:

- 12 completed their course.
- 3 left to continue their studies elsewhere.
- 5 remained home on account of ill-health.
- 1 died.
- 4 found suitable employment before completing their course.
- 2 left the country.
- 3 were unsuitable.
- 2 left for reasons unknown.

Changes in Staff

There were two changes in the teaching staff of the Ontario School for the Blind last year. Miss Murray Snetsinger, literary teacher, resigned to be married, and Miss Emma Moffitt was re-appointed after a year's absence at Queen's University to fill the vacancy. Capt. S. C. Clegg, physical director and boys' supervisor resigned to follow other work, and his place was filled by Philip King of Brantford.

Health of the Pupils

In general, we have had less sickness than usual among our pupils during the past year, aside from the usual run of colds, and several cases of influenza. Two small children contracted whooping cough, but they were isolated, and fortunately no more cases developed. After they had sufficiently recovered they were sent to their homes to recuperate. On February 27th, two girls, neither of whom had much sight, collided with each other, and the accident resulted in the injury of one girl's eye. She was sent to the General Hospital for treatment. Our eye specialist advised the removal of the injured eye, but the mother would not consent and the girl returned to her home.

On Christmas Day, 1928, a young lad from Viking, Alberta, was stricken with cerebral meningitis, the result of a gunshot wound which caused his blindness. The boy was in a critical condition for weeks, and on his recovery our physician advised that he be sent to his home, as a recurrence of the malady was liable to happen at any time. The boy begged to remain, however, and was allowed to do so. On May 10th, 1930, he was again taken ill. His sister

came on to assist in nursing him, but he died nine days later, and his body was taken to his home in the west.

Blind children seem to be less able to resist disease than other children. This may be due partly to lack of exercise to keep their bodies in good physical condition, and in some cases there are certain inherited weaknesses. We therefore make a point of watching their health carefully, building up their bodies with systematic physical training and healthful outdoor exercise. Plain, substantial food and regular hours of retiring and arising are insisted upon, and any small illnesses are given prompt attention by the trained nurse always on duty. Our physician visits the school daily.

Ethel Charlton Memorial Prize

Ethel Charlton, daughter of the late Honourable W. A. Charlton, was at one time a pupil in the Ontario School for the Blind. She died several years ago, and in May, 1930, a letter was received from Miss Charlton's sister, written on behalf of her mother, saying that it was their wish to establish an annual graduation prize to be given each year at the discretion of the Principal and his staff, to the most deserving blind pupil graduating that year. The prize, amounting to \$75.00, was given in memory of her blind daughter, and was to be known as "The Ethel Charlton Memorial Prize." The first award was made in June, 1930 to Miss Mary Edwards, of Toronto, and was presented by Miss Charlton, a sister, who made a special trip to Brantford for that purpose.

This was a kind and generous action on the part of Mrs. Charlton, and also a fine appreciation of the work the Ontario School for the Blind is doing for the blind youth of Canada. The awarding of this prize annually will be of real value to some blind boy or girl leaving the school to make his or her own way in the world.

Field Day

Our Annual Field Day was held early in June in the school grounds. There were various events for the three different groups, seniors, intermediates, and juniors. There were races, broad and high jumps, pole vaulting, throwing the basketball, and novelty races, such as sack races, three-legged races, etc. On this day the pupils are always in high spirits, and rivalry is keen. After the athletic events there was a picnic supper served under the trees, and in the evening the teachers gave a dance for the boys in the school gymnasium.

June Concert

Our June Concert was held this year June 15th and 17th. It is always necessary to hold the concert on two nights to take care of all who wish to attend.

We have set for ourselves by previous performances, a high standard of excellence, and neither the pupils nor the teachers are willing to fall below this standard. This year's concert was satisfactory in every way. There was a short play in costume presented by a group of the junior pupils, and it was acted with naturalness, spirit and enthusiasm, calling forth much applause from the audience.

The musical numbers prepared under the direction of Mr. Lord and his staff, showed careful preparation by both students and teachers. A young girl from the west did excellent work with two piano selections, and a young man from Ontario in his vocal renditions, displayed marked natural ability, developed under sympathetic training. The musical programme was varied in character, including pipe organ, piano and violin selections and vocal and

choral numbers. The choral work was especially good. The smallest children contributed their part to the evening in amusing recitations.

During the evening, awards of the different trophies were made—trophies won in the Field Day Competitions, and also the award of the Louis Braille Proficiency Trophy for girls, and the Irene Wettlaufer Efficiency Trophy for boys. The first award of the Ethel Charlton Memorial Prize was also made.

Improvements to Buildings and Grounds

During the summer holidays the boys' dormitory and the girls' dormitory were repainted throughout, and also eleven classrooms in the main building.

In October a portion of the roadway through the grounds, from Ava Road entrance to the entrance of the main building, was improved, a tarvia construction replacing the old dirt and gravel roadway. This has effected a great improvement in the appearance of our grounds.

Convention

In June I attended the Thirtieth Biennial Convention of the American Association of Instructors of the Blind, held in Vancouver, Washington, and had the opportunity of discussing with superintendents of other schools many problems in connection with the administration of a school for the blind. Many very excellent papers were presented dealing with various phases of school work, and these were afterwards discussed in detail. New inventions were on exhibition which gave certain definite ideas of new possibilities in vocational and other equipment. Round table groups were given the opportunity of discussing their special problems, and these were probably the most interesting contributions made at the Convention.

Returning by way of the Canadian West, I called upon the officials of the three western provinces who have to do with the sending of blind children to the school in Brantford, and gave them an idea of some of the requirements for admission. An interview of this kind serves much better to clear up difficulties arising from time to time, than correspondence during the term.

Royal Commission

In August of this year, I was summoned to Winnipeg to give certain information before a Royal Commission investigating conditions affecting the blind in Manitoba and Saskatchewan, as the Ontario School for the Blind educates children from these provinces. Dr. O. H. Burritt, Principal of the Pennsylvania Institution for the Instruction of the Blind, at Overbrook, Pa., was selected as Chairman of this Commission.

Among other things, the advisability of establishing a school in the west large enough to accommodate all blind children from Alberta, Manitoba and Saskatchewan, was discussed. I gave it as my opinion that while it was always advisable to have blind children educated as near home as possible, it was better to have them educated in a well-equipped school at a distance, such as the Ontario School for the Blind, than in a poorly equipped school near at home. The cost of maintaining a modern and up-to-date school for the blind was not small, and at the present time the western provinces were required by the Ontario Government to pay a not unreasonable sum for the maintenance and tuition of their pupils.

On October 19th, Dr. Burritt visited the Ontario School for the Blind to make his personal investigation of our school in this connection. While his

report to the Royal Commission has not yet been received, he seemed well pleased with the organization of the school. The Manual Training Department, under Mr. W. B. Donkin, blind instructor, came in for a great deal of praise, and he requested that he be permitted to send the Manual Training Instructor from the Pennsylvania School to visit us and see what is being accomplished here.

The Canadian Choir

On October 11th, a group of Canadian singers, known as the Canadian Choir, left for the old land to compete in the famous Blackpool Musical Festival. While this of course had nothing to do with our school work, special interest was aroused because Mr. Frederick Lord, Musical Director of the Ontario School for the Blind, was the leader and organizer of this choir, and two other members of our staff were members of the choir, Mrs. Lord, Instructor of Violin, and Miss A. MacGillivray, our Visitor's Attendant. In competition with many other choirs, the Canadian Choir won fourth place, and Mr. Lord deserves commendation for his splendid work with this choir. They returned to Brantford on November 16th.

The Problem of the Subnormal Child

During late years an increasing number of applications for admission to the Ontario School for the Blind have had to be refused, as these applications were made in behalf of children who were subnormal mentally.

Children of this type are a misfit in any school devoted to the education of normal children, and much more so in a school for the blind where they must be the associates of normal children not only in the classroom, but in the dormitories and on the playground. They require training of a very special nature, and are mentally incapable of benefiting by the advantages offered in a school for general education, and they have a very detrimental effect upon the normal children with whom they must associate. The problem of educating a mentally normal blind child is a very different one from caring for a subnormal blind child. A bright child handicapped by blindness should not be subjected to the additional handicap of constant association with the mentally subnormal.

W. B. RACE,
Superintendent.

Brantford, February 7th, 1931.

PHYSICIAN'S REPORT

Sir,—I have the honour to submit the following report for the year ending October 31st, 1930.

During the year there were 114 cases of influenza colds, with 7 of these cases developing ear trouble as a result.

Two small girls contracted whooping cough and were kept in the school hospital for eight weeks, after which they were sent to their homes to recuperate for the rest of the term.

One boy was laid up with rheumatic fever from April 19th until May 11th, and on April 30th, the porter of our school contracted the disease in a more serious form, being unable to resume his duties in the school until midsummer. There were two cases of rheumatism, and two cases of quinsy. There were five cases of scabies.

A boy from the west who had recovered from a serious case of meningitis in our school hospital the year previous, came down with another attack on May 10th. The boy died nine days later.

Besides minor accidents cared for in our school hospital there were two of a more serious nature. One girl injured her eye in a collision with another girl. She was removed to the General Hospital, and placed under the care of our eye specialist. He advised the removal of the eye, but the parents objected and took the girl home. The head laundress of the school while engaged in her duties caught the finger on which she was wearing a wedding ring in the machinery. Her finger was so badly lacerated that it had to be removed. She was also cared for in the General Hospital.

Respectfully submitted,

J. A. MARQUIS,
Physician.

DENTAL SURGEON'S REPORT

Sir,—I have the honour to submit the following report for the year ending October 31st, 1930.

During the year all the pupils have had their teeth examined and the following work was done:—

Boys, Fillings inserted, one hundred and forty-five. Extractions, permanent teeth, eight. Deciduous teeth, thirty-two.

Girls, Fillings inserted, ninety-one. Extractions, permanent teeth, five. Deciduous teeth, seventeen.

The pupils are to be commended for the good attention they give to their teeth.

Once more I would mention the co-operation I receive from the pupils in attending to their work. This makes my duties easy and a pleasure. I would like their parents to know this.

Respectfully submitted.

J. R. WILL,

REPORT ON MUSICAL INSTRUCTION

Sir,—I have the honour of forwarding my report on the Music Department, in connection with the Ontario School for the Blind at Brantford.

The annual examinations in Practical and Theoretical subjects took place in the week of June 2nd, 1930; and included tests in Organ-playing; Violin-playing; Solo and Choral Singing; Rudiments and Elementary Harmony; Intermediate Harmony; Counterpoint, and Musical History.

In Piano Playing—

Introductory Grade:	One pupil gained honours and two passed.
Elementary Grade:	Four gained honours, three passed.
Primary Grade:	Two received honours, two passed.
Junior Grade:	Three passed, two with honours.
Intermediate Grade:	One passed with honours, one passed.
Progressive Grade:	Two passed, one with honours.

Organ Playing—

Junior Grade:	Two passed, one with honours.
Progressive Grade:	One passed with honours.

Violin Playing—

Primary Grade:	One gained honours.
Junior Grade:	One passed.
Intermediate Grade:	One passed.

Singing and Voice-Production—

Elementary Grade:	One gained first-class honours.
Primary Grade:	Four passed, one with first-class honours and one with second-class honours.

Rudiments and Elementary Grade—

Six obtained first-class and four second-class honours.

Advanced Rudiments and Elementary Harmony—

Seven passed, five with honours.

Junior Counterpoint: Seven passed, five with honours.

Musical History: Eleven passed, two with first-class and nine in the second-class honours.

The candidates numbered 70, in all.

The students of the several Piano classes were satisfactory and reached a fairly high average in the examination. Two or three displayed exceptional talent. Evidently much more attention has been given to the essential points of good piano playing than in the previous two or three years.

The selected pieces presented for performance were well-chosen and of varied character, and were calculated to display the individual style of the various candidates to the best advantage.

Here I would suggest that this forward movement in the Piano section should be maintained and still further attention should be given to "touch" to the correct use of the pedals, to Rhythm and Interpretation generally. Evidently the practising of the younger children is being well supervised. The teachers in this particular Department, Mr. F. Lord, (Musical Director); Miss E. Perry, A.T.C.M., and Miss S. Miller deserve much praise for the general excellence of their teaching.

In Organ playing the results were very fair. One youth displayed a special gift for Organ performance, his natural ability is such that with further application and study under his teacher, Mr. Lord, he would become a good Church Organist and Recitalist.

The Violin Class: Under the guidance of Mr. F. Lord the work accomplished has been highly satisfactory. There has been a noticeable improvement in bowing, in tone and in interpretation. The classical selections performed by the students were of the best.

In Solo Singing the results were as a whole, quite good. Both songs and studies were sung with good tonal effect. Careful training was apparent in the clear enunciation and good pronunciation of the pupils' work.

The theoretical side of the examination showed marked improvement, especially in the Rudiments and Elementary work and in Musical History. One especially noticeable feature was the ability of the pupils to express their

thoughts on paper more clearly than on former occasions. Miss Susie Miller has proved a very capable and painstaking teacher in theoretical knowledge.

The School Choral Class of about forty members did well. I listened with much pleasure to several two and four part compositions which were sung with considerable expression and with good tone quality. A Junior Choir under the direction of Miss Macgillivray sang several little pieces in one and two parts. Their performance was most gratifying.

The Tuning Class under Mr. Ansell's direction continues to do very excellent work in both tuning and in mechanical repairing. Several of the well-equipped students are now leaving to find work with piano firms in various parts of Canada.

In concluding my remarks, I should like to refer to the excellent discipline which exists in this important Government Institution. This is entirely due of course, to the able Principal and his staff of assistants who are to be congratulated.

I have the honour to be, Sir,

Yours obediently,

ALBERT HAM,
Mus. Doc., F.R.C.O.

LITERARY EXAMINER'S REPORT

Dear Sir,—I beg leave to present my first annual report as official examiner of your literary classes for the academic year ending June 30th, 1930.

At the time of my visit to your school, the teachers of the various grades submitted statements, showing work taken during the year in the different subjects. From these statements and by examining the pupils in these subjects, especially Spelling, Arithmetic, Reading, Writing, Geography, History, and Literature, I was able to compare the work of these pupils with that done by pupils in our Public Schools. Teachers and pupils are to be commended for the excellent work done in the various grades. In some subjects such as Arithmetic and Geography, more time is required in teaching, owing to the necessary use of the Braille slate in Arithmetic, and to the difficulty of using maps in Geography.

I should like to recommend a more extensive use of outline maps in Braille for the classes in Geography, if these are procurable. While excellent results are being obtained by the use of the large wooden maps, now in use, much time would be saved by having a map in Braille for each child.

The classes in Physical Culture demonstrated that great confidence has been developed in these blind children and whether in the Strathcona exercises, work on the gymnasium floor, or in games the children performed all exercises with great precision and confidence. I had the privilege of seeing the work of the boys at the annual concert in their pyramid building programme, and I cannot conceive of the work being done more correctly or with greater despatch.

The work of the pupils in sewing, cooking, knitting and crocheting reflects great credit on the teachers of these subjects. Much of the work is similar to that included in the course of study in Domestic Science, used in our Public Schools.

As the pupils who have completed the public school course of study are not preparing to enter other schools, they are given a course, which includes

subjects not usually taken in the Lower School of our High Schools. These subjects, such as Ancient History and Physics, make a great appeal to these pupils. They attained great proficiency in advanced work in English Literature, having studied Julius Caesar last year. Their course also included Algebra, and Geometry.

Samples of work done in the Manual Training Classes were on exhibit during my visit, and I was much impressed by the skill developed in the pupils under the direction of Mr. Donkin.

I should like to commend you in your choice of teachers. Only those who have proven their efficiency as teachers in our Public School system can adapt themselves to new methods and it is no doubt owing to the careful selection of your teachers that such a high standard of work is maintained in your school.

Some children in the Primer Class were not making much progress. In contrast to the progress of other members of the class, this was very obvious. These children, handicapped by blindness, are also handicapped by being direct-learning children, and if they could see would be placed in an Auxiliary Class. Just as in our Public Schools, special classes are provided for such children, special provision should be made in some other school for those who are thus doubly handicapped. Ability to learn Braille is essential in this school if advancement is to be made.

I should like to express my appreciation to you for your co-operation and that of all members of your staff on my first official visit to your school.

Respectfully submitted,

W. J. MORRISON, *Literary Examiner*,
Inspector of Public Schools, Brantford, Ontario.

OCULIST'S REPORT

Sir,—

I have the honour to report the result of the Ophthalmological examination of the new pupils entering the Ontario School for the Blind, October, 1930.

The class is composed of eleven girls, and fourteen boys, twenty-five in all.

Condition of Sight			
	Male	Female	Total
1. Limited objective vision in both eyes.....	9	4	13
2. Limited objective vision in one eye.....	2	3	5
3. Quantity of Perception of light in both eyes.....	1	1	2
4. Perception of light in one eye, none in other.....	..	1	1
5. Without perception of light in either eye.....	2	2	4
	14	11	25

From the above classification, it is evident that there are four pupils who are totally blind in both eyes, constituting a higher percentage than usual, last year's class having two only.

Ten have lost the sight of one eye. Two have only quantitative perception of light. The remainder of the class have varying degrees of vision ranging from hand movements at two feet to ability to count fingers at eighteen or nineteen feet. Indeed, two or three have sufficient sight, that with special instruction, they might be able to carry on their school work visually.

Diseases Causing Blindness

	Male	Female	Total
1. Optic atrophy.....	1	1	2
2. Cataract (congenital).....	3	..	3
3. Ophthalmia neonatorum.....	2	2	4
4. Injury in one eye and sympathetic ophthalmia in other	..	2	2
5. Iritis and uveitis.....	1	1	2
6. Microphthalmus.....	..	1	1
7. Myopia.....	4	1	5
8. Keratitis.....	..	1	1
9. Choroiditis.....	2	2	4
10. Buphthalmus.....	1	..	1
	14	11	25

Myopia appears to be the chief cause of defective vision in the above group, there being five cases, four of which are boys. Next in order of frequency are Ophthalmia Neonatorum and Choroiditis, four cases in each class, which is somewhat higher than in previous years; although two of the cases listed as Ophthalmia Neonatorum might more correctly be classed as Keratitis because the history is not entirely definite, even though the clinical picture is well defined.

Injury and Sympathetic Ophthalmia claims two cases, as does Uveitis and Optic Atrophy, and Cataract three, all occurring in boys. An occasional case of Microphthalmus and Buphthalmus were also noted.

There were no cases of Interstitial Keratitis.

Several pupils were re-examined and it was gratifying to note a visual improvement in two or three of them. In one other case, we felt that a proper correcting lens would be of help. We found no cases that might have been improved by surgical means but what had been taken care of before admission to the school.

Respectfully submitted,

NORMAN W. BRAGG, M.D., F.A.C.S.

APPENDIX M

REPORT OF THE SUPERINTENDENT OF THE ONTARIO SCHOOL FOR THE DEAF

I have the honour to submit the Annual Report of the Ontario School for the Deaf for the year ending October 31st, 1930.

Appointment as Superintendent and Principal

As my appointment became effective on July 1st, the report on the part of the year from November 1st, 1929, to July 1st, 1930, is based on the records on file in the office.

Buildings and Equipment

The school building is quite new, having been completed in the autumn of 1922. It has been kept in excellent condition and, with a few minor repairs, can be made as good as when it was opened.

The following repairs and improvements have been made during the last three months:

(a) The lodge house and the "green" house have been removed and the grounds under them levelled.

(b) The Superintendent's residence and the maids' building have been repaired, painted and decorated.

(c) The open ditch at the east side of the grounds has been tiled and filled in with the accumulations of years of rubbish.

(d) The boys' dormitory has been painted and decorated.

(e) New steam lines have been installed to the dormitories.

(f) Playground equipment, consisting of swings, teeters, giant stride, slides, travelling rings, sand boxes, etc., have been installed.

(g) A new set of weigh scales, with an adequate covering, has replaced the old ones, which were condemned.

(h) A new verandah replaces the one in the front of the farmer's house, which was tumbling down.

(i) The verandah on the hospital has been repaired.

The other needed repairs are now receiving the consideration of the officials and will be made in a short time.

The Work of the School

The academic work is carried on by thirty-one teachers, all of whom have taken the Normal School course and qualified for Second Class or First Class certificates. Owing to the increase in attendance, one teacher was added to the staff in January.

The work itself included classes from the kindergarten to the fifth form and was carried out satisfactorily except that Art as a subject seems to have been omitted in the higher grades. Four pupils were granted Entrance standing in 1930 on condition that the course in Art be completed.

Four instructors were employed for the industrial work, but this phase of the course seems to have been treated somewhat as an additional subject and not as an integral part of the curriculum. In spite of this rather unsatisfactory arrangement, good results were accomplished.

Although there is a farm connected with the school, the pupils have not received any training in either Agriculture or Horticulture.

Attendance

The total number of pupils enrolled during the session of 1929-30 was 320, the average being 310. Of these, forty-seven did not return in September.

The attendance in classes was lower than it should have been as a result of a severe epidemic of "Grippe" or "Flu" in December, due in part at least, to the fact that it was impossible to regulate the heat of the dormitories because the thermostats were out of commission.

Method of Teaching

Several methods have been in use in the Schools for the Deaf in the past. All of these, in the hands of enthusiastic teachers, have accomplished a great deal in placing the Deaf in a condition to enjoy, to a greater degree, the position in society in which they found themselves. The term "dumb" has, from time immemorial, been applied to those unfortunate enough to be deaf. During the last quarter of the nineteenth century, many noted educators and scientists, among them being Dr. Alexander Graham Bell, the inventor of the telephone, contended that the Deaf were not dumb, and that as they had all the organs of speech, they could, with the proper instruction, be taught to speak the same as those with normal hearing. A system was initiated, known as the Oral Method, by which the sign language was eliminated and the deaf were taught lip-reading and speech and their vocal organs exercised in such a way that they could speak intelligibly and intelligently. The results of the use of the Oral Method are so far beyond those achieved by any of the other methods, that it is now used almost universally.

Wonderful aids to success are the use of the piano and the radio ear. The former, through the use of rhythmic exercises, helps in giving tone, emphasis and inflection, and at the same time, trains the pupils in graceful, regular movements of the different parts of the body. The Radio Ear makes use of any residual hearing that a pupil has and enables him to hear the natural tone of the voice of the teacher, or of himself or other pupils. It is the best means of acquiring a natural tone of voice, that is available up to the present time. The Radio Ear we now have gets its power from a storage battery. As the current is irregular and the battery soon becomes exhausted, the efficiency of the machine gradually decreases. We are hoping, however, to exchange it for one operated by alternating current, in which the efficiency remains constant.

Plans are under way to increase the efficiency of the industrial department by the addition of more instructors and by replacing the present shops with new and modern buildings and equipment.

There is also great need for a gymnasium, in which pupils will be able to receive proper physical training, particularly during the winter months.

The Bursar's Statement of Expenditure, the Physician's report and the report of the Literary Examiner are appended hereto.

H. B. FETTERLY,

Superintendent.

Belleville, November 1st, 1930.

Officers of the School

H. B. FETTERLY, M.A.	Superintendent and Principal.
C. B. MCGUIRE	Bursar.
W. W. BOYCE, M.D.	Physician.
J. CHANT, M.D.	Aurist and Oculist.
MRS. H. MACCLUGGAGE	Dietitian-Housekeeper.
MISS K. BAWDEN	Secretary and Stenographer.
MISS M. ALLISON	Trained Nurse.

Teachers

D. R. COLEMAN	Teacher Emeritus.

Miss A. James.

Teachers-in-Training:

Second Year: F. P. Cunningham, A. J. Clare, Miss G. E. Rathbun, and Miss G. Parry.

Mrs. M. Glenn.....Teacher of Sewing.

L. Morrison.....Teacher of Printing.

T. O'Hara.....Teacher of Carpentry.

A. Morrice.....Teacher of Shoemaking.

J. N. Boyd.....Baker.

LITERARY EXAMINER'S REPORT

I beg to submit for your consideration and for future reference my report on your school for the current school year. While we personally discussed many points pertaining to the work, during my official visits, still there are a few points that I wish to place in permanent form, and a few suggestions that I wish to make.

Having spent fifteen days among the various classes and having made two full inspections, one during the Autumn Term and the other recently, I may claim to have a definite idea of conditions as they exist in the School. And having this knowledge, I have no hesitation whatever in expressing my approval of what you are trying to accomplish for these children, who are handicapped by nature in the absence of hearing. Persons, who have not been intimately associated with this class of children, cannot properly appreciate the extreme difficulty under which you and your staff are labouring. After having inspected the School for twenty-three consecutive years, I do appreciate your task and most heartily compliment the staff on what they have been able to accomplish. It is true that you have a few classes, where the children for various reasons are exceedingly slow in the ordinary school subjects, and I will refer to them a little later. But it is also true that you have a number of classes, who are more than ordinarily bright. These are making good progress and are happy in their work. I found the utmost confidence prevailing between the pupils and their teachers. There is a side to this work that the public generally knows nothing about, and it is the almost parental interest that your teachers take in these children. It does not matter quite so much with the older pupils,

but even here it is evident, but among the little fellows, who are away from their mothers when all children at times want to be cuddled up to a mother, these young lady teachers, as far as it is possible, are mothers to these children. To me it is very touching, and if the mothers could see what I have repeatedly seen, it would comfort them greatly, as they think of the little one away from the home nest.

I have, on different occasions, referred to the harmony that prevails among the several members of the staff. I am pleased to again comment on that happy condition of affairs. It speaks loudly for the loyalty of the staff that conditions are as they are after the lapse of time since the late esteemed Superintendent passed to his reward.

I regret exceedingly that it was not my privilege to inspect the class who have passed High School Entrance (but the Minister directed otherwise). I have no doubt, however, that they have continued to do the same class of work that they did before they entered that class. I also regret that you have found it not possible to have a class of pupils ready for Entrance to High School at the close of this school year. I hope you will be able to retain them for another year and then, if they have to leave school, they will go out with a certificate of standing that will appeal to the average person as demonstrating that these children can successfully complete the Public School Course of Study.

I gave particular attention to the work in "Silent Reading" that Miss Ford is stressing in her department of the school. I saw it applied in practically every class in her department and the benefits are very evident. I told her, and I repeat here, that I consider it one of the best features that has been introduced into your excellent school in many years. The children get a grasp of language that has been sadly lacking in past years. I strongly recommend that it be carried on as far as circumstances warrant. In its more advanced forms, it might well be extended beyond the Junior Department. As you probably know, the preparation of the material requires a lot of time and labour on the part of Miss Ford and her staff of teachers. The duplicator they have does not do satisfactory work and adds materially to the labour that must be performed outside of class hours altogether. I am pleased to learn that you have recommended a machine for this purpose of duplicating, that you and Miss Ford believe will be satisfactory.

From the fact that you have an excellent system of class records, it is not necessary for me to refer to individual classes, but I will say that I found the proficiency in the several classes all that could be expected, and the progress is being made.

While your school is nominally divided into three departments, Junior, Intermediate, and Senior, still the Course of Study has been so well arranged that a child passes from one department to the next almost without knowing it; while if necessity compels him to leave at the end of any department, he has a completed course that is complete in itself as far as it goes. I like your arrangement well.

The Rhythm Work has made wonderful progress and it is easily seen that the work is well worth while. The demonstrations that I witnessed, both with junior and senior pupils, clearly proved its value.

I missed the demonstration of the Radio Ear and Audiometer at this inspection, as the machines are not in working order. We all are agreed on the fact that they are of value, and they should be put into working order and into use again at once.

Referring again to those classes, where the children are not able to satisfactorily handle literary work. We have them in all schools, while possibly you have a slightly larger proportion of them. It seems to me that it would be better to put a stronger emphasis on "Handwork" with these children. I would give them all the language that they are capable of taking, but I would have a larger amount of work similar to that carried on in Auxiliary Classes throughout the Province. Last year, I recommended a greater use of "Ungraded" classification with these children. What I referred to is known usually as "Promotion Classes," where for any reason whatever, the children have fallen behind their class, these classes help them to catch up, as each child is practically a class by himself. As I see it, it is not possible to teach some of our classes as classes. The children differ so widely in ability and attainments, that they must of necessity be taught individually. That is exactly my suggestion of last year, and I am now adding a recommendation for more "Handwork."

In conclusion, let me express to you, and through you, to your staff my appreciation of the kindness and courtesy shown to me during my inspection.

All of which is respectfully submitted.

H. J. CLARKE, B.A.,
Public School Inspector,
South Hastings, Belleville and Trenton.

PHYSICIAN'S REPORT

In making my annual report on the health of the school for the term of 1929-30, I may be permitted to mention, briefly, what has been the ordinary custom at the beginning of the school term in September.

The bringing together of a large number of children, approximately 300, from practically all parts of the Province of Ontario and from conditions of home life that vary greatly in a sanitary way is obviously of a good deal of importance, as it may affect the subsequent health of the school. Previous to leaving home, the parents are advised that certain means or precautions be adopted to avoid carrying any infection, that might prejudice the health of others or involve the school in some epidemic. The school age of children is the time when communicable diseases are most frequent, and consequently, the utmost caution is necessary if such sickness is to be prevented. The precautions, taken at home, are supplemented by others as the pupils arrive at school. The Nursing Sister, Supervisors and others, coming into immediate contact with the children, are alert and watchful of anything of a suspicious character or of any apparent departure from health, and if at all in doubt, the child is at once quarantined as a "suspect" until a diagnosis is made. The trunks and other articles are disinfected. As early as possible all children, coming in for the first time, undergo a complete medical examination and this, with the aid of their personal reports, determines the state of health, any infirmity or physical defect or congenital or hereditary taint, and as far as possible, the mentality, which generally can be ascertained satisfactorily at some subsequent time and after observation and training. Following this and as soon as practicable, a medical examination is made of all the children of the school, their height, weight and measurements are taken, also, any other feature or personal defect or peculiarity, all being recorded for future reference and comparison. There are always a number of

children entering or returning to school, whose health is below par, gastro-intestinal disorders being quite common, underweight, a condition of marasmus, constipation, indigestion, skin affections, etc. With corrected habits, regulated physical exercise, proper sanitary attention, diet and treatment, they usually quickly respond and are soon reinstated. Occasionally we have pupils whose condition warrants little hope of complete restoration. These we endeavour to improve, make as comfortable as possible and enable them to continue in school.

During the early part of last session, we had very little sickness that would interfere with classes, and consequently, very little loss of school time.

About the middle of October, we had a small and mild epidemic of what seemed clinically ordinary sore throat. Swabs from many of these were sent to the Provincial Laboratory to determine the nature of the infection. It proved to be a mild sore throat of an infectious character. None of the children were very sick, some did not complain of anything, and most of them had no symptoms whatever excepting a slight redness of the throat with a little soreness.

In January, we had what seemed to be our seasonal epidemic of influenza, coming at a time when weather conditions were unsettled and when the same condition was raging generally throughout the Province. We have more or less influenza every year and it seems to be something we are powerless to escape. We had about eighty-five cases, some quite mild, but on the aggregate, more severe than many previous visitations, and some cases were decidedly virulent and accompanied by dangerous complications, particularly pneumonia and middle ear trouble. We had no other communicable diseases excepting chicken-pox of the mildest type a short time before the close of school. The accidents and injuries that occur, are generally incidental to the sports engaged in on the playgrounds, usually minor in character, such as contusions, sprains, etc., and do not interfere with classroom work. Occasionally we have fractures and dislocations. I regret to have to report the death of a young lad, James Morgan, which occurred on January 26th, 1930, after five days' sickness with a virulent form of influenzal pneumonia.

At the same time, Leonard Byers was dangerously sick with pleuropneumonia. A resection of a rib and drainage of pus from the chest was necessary. His convalescence was slow and it was considered best to send him to the Sick Children's Hospital in Toronto, where he ultimately recovered. In the following summary, I have omitted, including the above epidemics, also many cases of mild temporary sickness or indispositions incidental to growing children.

Gastro-intestinal disorders and constipation, 30; abscess, 2; asthma, 1; bronchitis, 7; adenitis, 2; skin diseases and acne, 7; enuresis, 2; jaundice, 3; acute and chronic otitis media, 12; laryngitis, 2; inflammatory rheumatism, 1; scabies, 6; debility, 5; epilepsy, 1; tonsillitis, 5; pneumonia, 11; pleuro-pneumonia, 2; empyæma, 1; appendicitis, 2 (one operation); orchitis, 1; minor injuries, 8; fractures, 2; fracture and dislocation, 1; pollipis of the ear, 1; paralysis of the hand, 1.

Yours respectfully,

W. W. BOYCE,
Physician.

PART II

SUMMARY OF STATISTICS OF ELEMENTARY AND SECONDARY SCHOOLS

I.—ELEMENTARY SCHOOLS

(January-December, 1929)

(a) Public Schools

	1929	Increase for the year	Decrease for the year
Number of schools.....	6,466	16
Total enrolment (exclusive of evening school pupils), boys, 276,551; girls, 264,007.....	540,558	2,772
Average daily attendance.....	386,864	1,961
Percentage of actual to possible attendance.....	90.27	1.14
Number of teachers: men, 2,168; women, 12,036.....	14,204	188
Normal School graduates.....	13,272	224
Normal College, or Faculty, or College of Education graduates.....	764	67
Number of University graduates.....	238	21
Average experience:			
Male.....	10.61	.14
Female.....	9.28	.21
Gross expenditure by Municipalities.....	\$31,455,211	\$987,276
Legislative grants received.....	\$ 3,318,071	\$110,122
Net expenditure by Municipalities.....	\$28,137,140	\$877,154

(b) Roman Catholic Separate Schools

Number of schools.....	770	27
Total enrolment: boys, 53,342; girls, 52,176.....	105,518	2,176
Average daily attendance.....	78,993	4,049
Percentage of actual to possible attendance.....	91.06	2.19
Number of teachers: men, 169; women, 2,359.....	2,528	95
Normal School graduates.....	1,553	30
Normal College, or Faculty, or College of Education graduates.....	86	9
University graduates.....	36	8
Gross expenditure by Municipalities.....	\$5,500,435	\$473,133
Legislative grants received.....	\$368,230	\$68,815
Net expenditure by Municipalities.....	\$5,132,205	\$404,518

(c) Protestant Separate Schools

Number of schools (included with Public Schools).....	5
Total enrolment.....	306	11
Average daily attendance.....	222	19

(d) Evening Elementary Schools

Number of schools.....	20	1
Total enrolment.....	3,369	23
Number of teachers engaged.....	101	3

II.—SECONDARY SCHOOLS

Figures below cover the school year September, 1929, to June, 1930, except for financial items which are for the calendar year 1929

(a) High Schools and Collegiate Institutes

	1929	Increase for the year	Decrease for the year
Number of schools: Collegiate Institutes, 63; High Schools, 142.....	205	5
Enrolment on last school day in May: boys, 27,948; girls, 29,527.....	57,475		
Average daily attendance.....	52,496	3,041
Percentage of average attendance to total enrolment...	91.34		
Number of teachers: men, 919; women, 1,128; of whom 82 men and 74 women supervise or teach part time in Vocational Department.....	2,047	92
Number of University graduates.....	1,838	101
Percentage of University graduates.....	89.79	.95
Number of specialists.....	1,522	79
Percentage of specialists.....	74.35	.35
Average annual salary:			
Principals.....	\$3,293	\$103
Assistants.....	\$2,380	\$28
All teachers.....	\$2,472	\$34
Highest salary paid.....	\$5,000	
Gross expenditure by Municipalities.....	\$10,621,982	\$1,153,379
Legislative grants received.....	443,727	\$4,543
Net expenditure by Municipalities.....	\$10,178,255	\$1,148,836

(b) Evening High Schools

Number of schools.....	23	3
Total enrolment.....	3,563	435
Number of teachers.....	158	31

(c) Continuation Schools

Number of schools:			
Five-teacher schools, 2; four-teacher schools, 1; three-teacher schools, 38; two-teacher schools, 155; one-teacher schools, 18.....	214	2
Enrolment: on last school day in May: boys, 3,844; girls, 5,524.....	9,368		
Average daily attendance.....	8,349	188
Percentage of average attendance to total enrolment...	89.12		
Number of teachers: men, 167; women, 288.....	455	5
Number of University graduates.....	53	11
Percentage of University graduates.....	11.65	1.44
Number of specialists.....	36
Percentage of specialists.....	7.91	.08
Average annual salary:			
Principals.....	\$1,833	\$50
Assistants.....	\$1,358	\$6
All teachers.....	\$1,576	\$6
Highest salary.....	\$3,550	\$250
Gross expenditure by Municipalities.....	\$1,256,360	\$78,536
Legislative grants received.....	\$230,977	\$9,830
Net expenditure by municipalities.....	\$1,025,383	\$88,366

(d) Vocational Schools

Number of Day schools.....	51	4
Total full-time enrolment: boys, 12,184; girls, 13,374..	25,558	2,381
Average daily full-time attendance.....	20,632	2,404
Total part-time enrolment: boys, 1,121; girls, 979	2,100	311
Total special enrolment: boys, 454; girls, 983.....	1,437	295
Number of full-time Day school teachers: men, 548; women, 345.....	893	198
Number of part-time or occasional Day school teachers	194	10
Number of Evening schools.....	67	1
Total Evening enrolment.....	44,431	2,838
Number of Evening teachers: men, 954; women, 532..	1,486	88
Gross expenditure by Municipalities.....	\$6,173,009	\$82,071
Legislative grants received.....	\$1,036,441	\$102,702
Net expenditure by Municipalities.....	\$5,136,568	\$20,631

Comparative School Statistics 1912-1929

I.—ELEMENTARY SCHOOLS

1. Day School Attendance

Year	Total Enrolment	Boys	Girls	Average Daily Attendance	Percentage of Average Attendance to Total Enrolment	Percentage of Aggregate to Possible Aggregate, i.e., Percentage of Actual to Possible Attendance
1912.....	467,022	239,187	227,835	291,210	62.35
1917.....	527,664	266,255	261,409	342,571	64.92
1922.....	601,485	306,225	295,260	425,018	70.66	86.80
1926.....	623,231	318,224	305,007	444,236	71.28	88.01
1927.....	634,592	324,138	310,354	456,978	72.01	88.49
1928.....	641,128	327,713	313,415	459,847	71.72	89.09
1929.....	646,076	329,893	316,183	465,857	72.11	90.45

In arriving at the possible aggregate, all the school days for the term of a pupil of non-compulsory age, and all the school days of a child of compulsory age, are counted, except in case of illness, properly certified, or of exemptions allowed by law, so long as he is a resident of the school section or until he is registered in a secondary school.

Duplications of enrolment in elementary schools owing to removals from one elementary school to another during the year, or owing to transfer to secondary schools, are carefully avoided in this calculation.

The percentage of average attendance to total enrolment, viz., 72.11, is low owing to the fact that a pupil once entered on the roll, if only for a few days, is counted in the enrolment for the year. The percentage of actual to possible aggregate attendance (90.45) as given above, represents correctly the situation as regards regularity of attendance in the elementary schools.

2. Classification of Pupils

(A) RURAL

Year	Kinder- garten	Kinder- garten- Primary	Form I	Form II	Form III	Form IV	Form V *	Total	Percent- age of total Enrolment
1912.....	93,005	43,775	42,450	44,049	3,984	227,263	48.67

XVI	Counties of Dundas, Glengarry (in part), Prescott (in part), Russell (in part), Stormont (in part); Towns of Alexandria, Cornwall; Village of Casselman.....	J. S. Gratton.....	Plantagenet.
XVII	County of Carleton (in part); City of Ottawa (in part).....	F. J. McDonald, B.A.....	Ottawa, 101 Grove Ave.
XVIII	City of Ottawa (in part).....	C. A. Latour, B.A., B.L..	Ottawa, 67 Osgoode St.
XIX	County of Prescott (in part); Towns of Hawkesbury, Vankleek Hill.....	F. Choquette, B.A.....	Hawkesbury.

B—High Schools and Collegiate Institutes:

I. M. Levan, B.A.
 R. W. Anglin, M.A.
 A. J. Husband, B.A.
 W. A. Jennings, B.A.
 A. G. Hooper, M.A.

C—Continuation Schools: D—Technical Schools:

G. K. Mills, B.A.
 J. P. Hoag, B.A.

D. A. Campbell, B.A.
 F. S. Rutherford, B.A.Sc.
 M. A. Sorsoleil, B.A.
 Miss A. M. Hamill, B.A.
 L. S. Beattie, B.A.

E—Inspector of Manual Training and Household Science—Albert H. Leake.

F—Inspector of Agricultural Classes—J. B. Dandeno, B.A., Ph.D.

Address of above Inspectors—Toronto, Parliament Buildings.

TABLE 26

SUMMARY OF HIGH SCHOOL ENTRANCE EXAMINATION RESULTS, 1930

Enrolment, Senior Fourth Grade, 1929.....	61,993
Number of High School Entrance Candidates:	
Recommended by Principal on Group II.....	13,896
Taking written test on Group II.....	33,542
	47,438
High School Entrance candidate percentage of 1929 Senior Fourth Enrolment	76.52%
Number of candidates successful on written test on Group II:	
By Regulation 11—(1) and (2).....	22,168
(3) and (4).....	1,733
(5).....	314
(6).....	383
	24,598
Total number of successful candidates.....	38,494
Percentage of all candidates who were successful.....	81.15%
(28.61% by Principal's recommendation and 52.54% by passing written test).
